[alex@sci.utah.edu](mailto:alex@sci.utah.edu)

THIS ALWAYS BUGGED ME.

[xkcd]

# Principles

Special type of Spatial Data

Use maps when spatial relationships are paramount

Map Tasks:

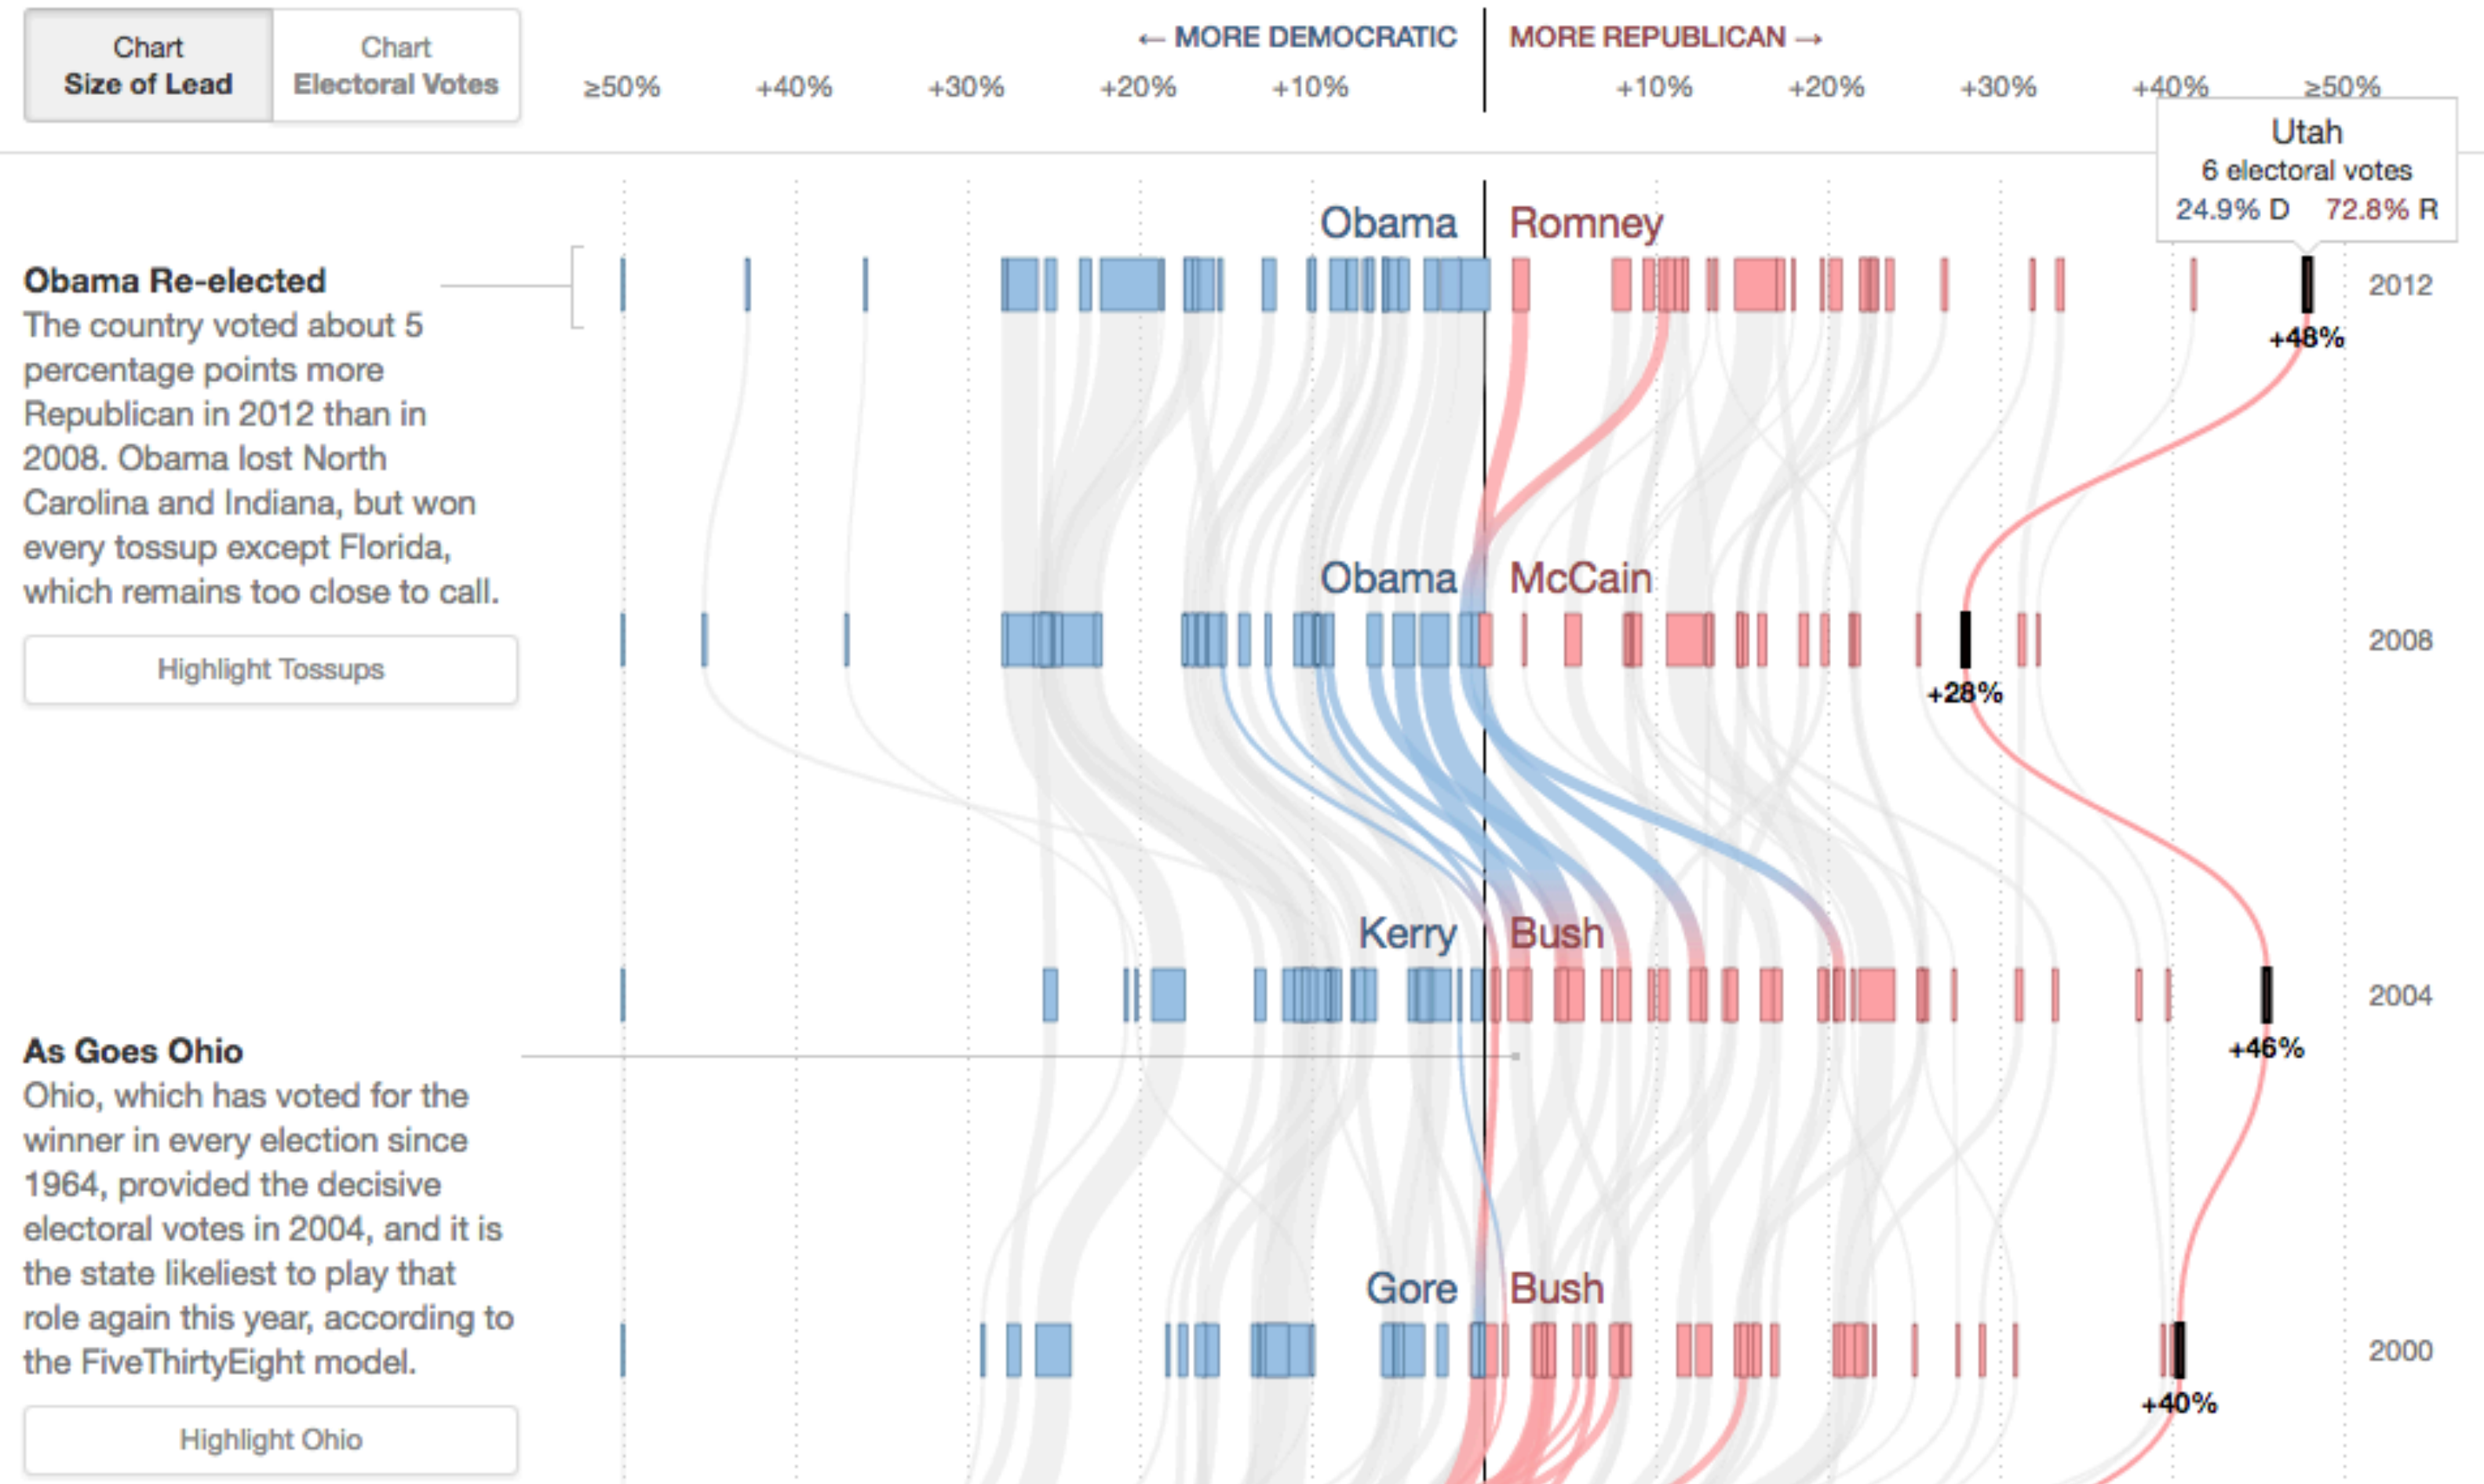

- Find Location / Feature (county, country, city, street)

- Find Route

- Identify attribute associated with location (elevation, land/water, GDP)

- Compare attributes between Locations/Features

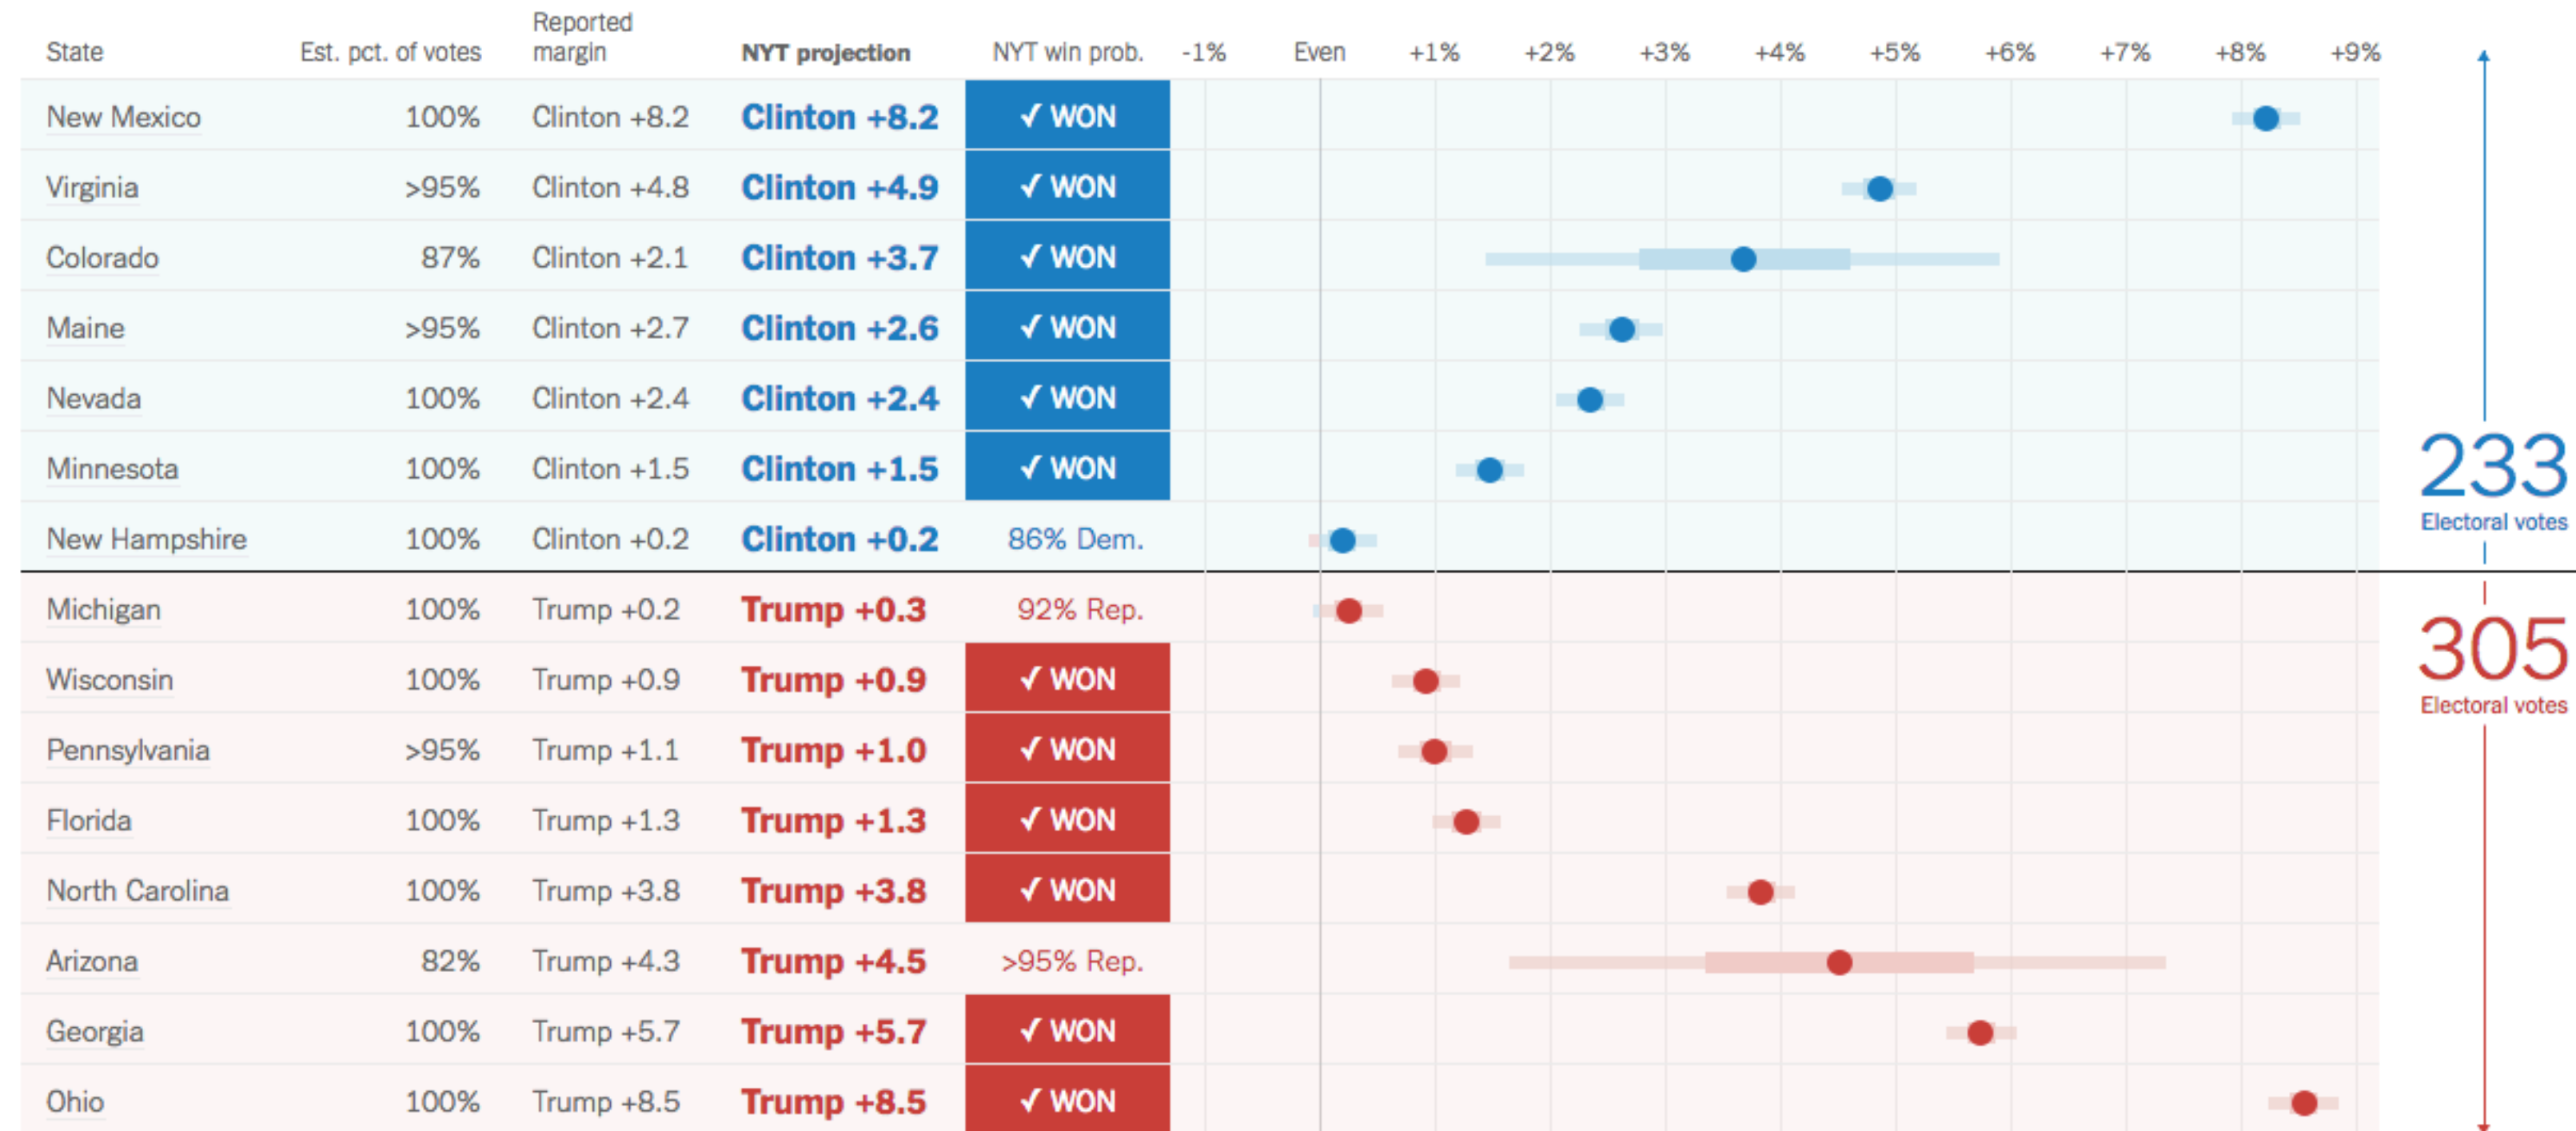

# Do we really need a map?

# Do we really need a map?

It's hard to do more complex things with maps

Is the spatial context paramount?

# Map Projections

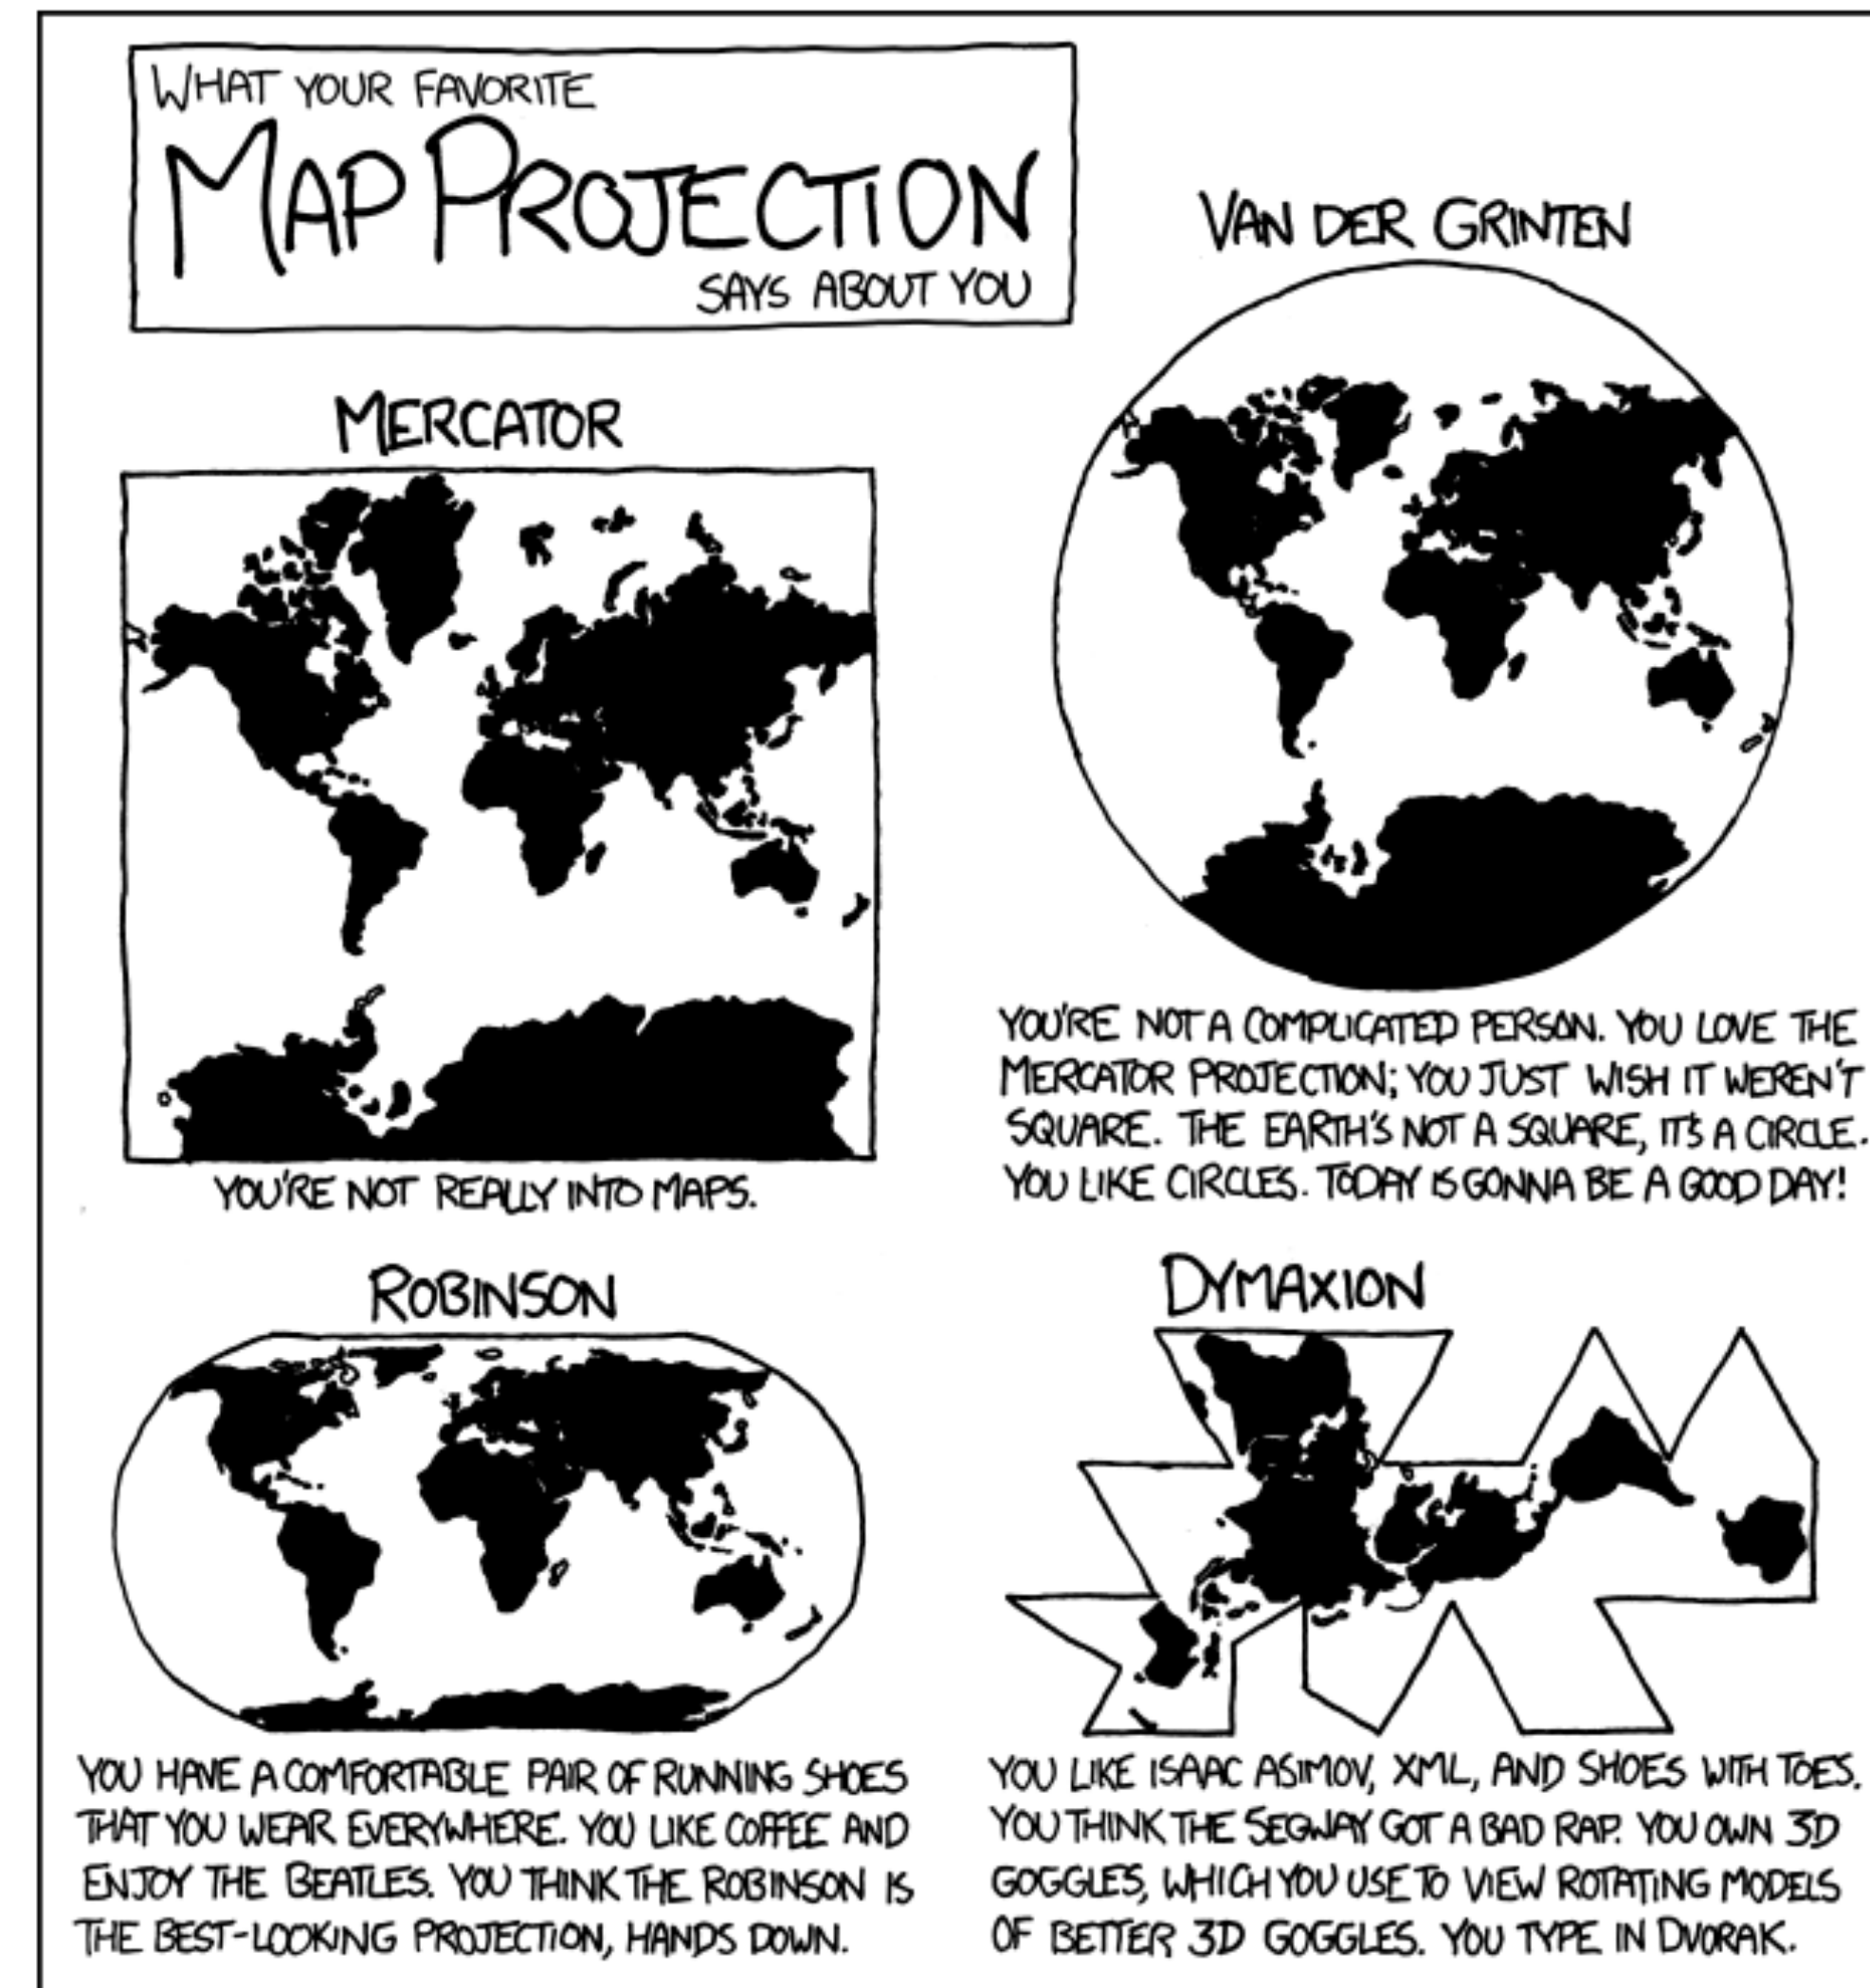

# Why projections?

Earth is a (flattened) Sphere

Need to project or “unfold” the hull of the sphere to fit onto paper/screens

Relevant attributes:

Area, Shape, Direction, Bearing, Distance, Scale

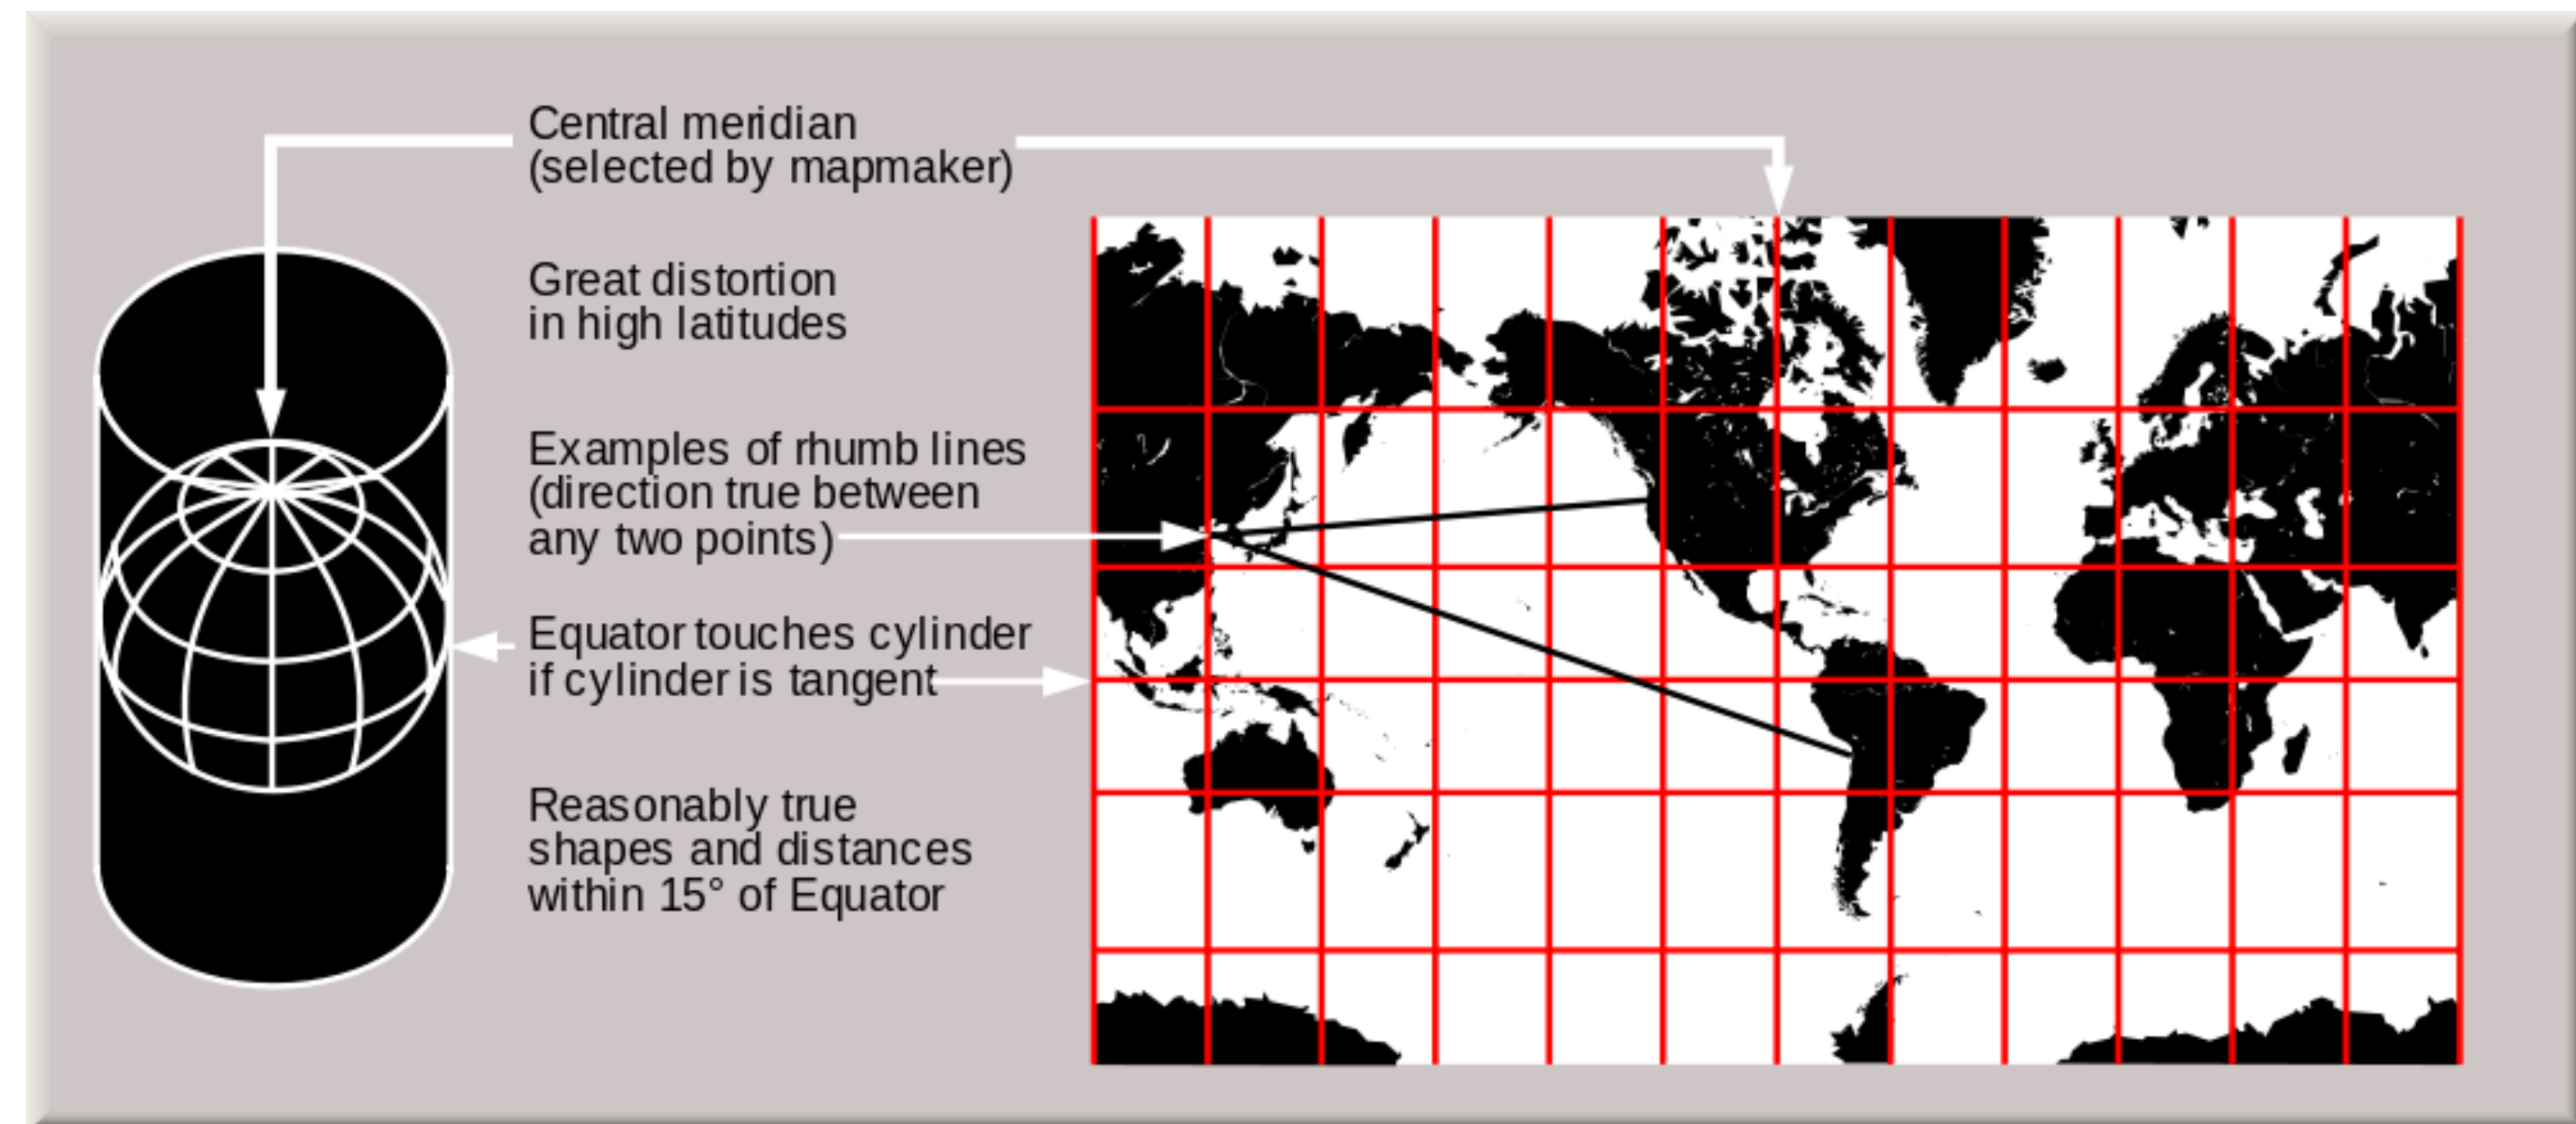

# Mercator Projection

Gerardus Mercator, 1569

Projection onto a cylinder wrapped around the globe  
conformal map projection; that is, angles are preserved.

Lines of constant bearing  
are straight lines.

Constant bearing means  
constant compass heading -  
developed for sailors

# Mercator Projection

D3 / M.  
Bostock

# Mercator Projection of Mars

# Why Mercator is Problematic

Traditional map, used to teach geography

Massive distortion of area distant from equator

“unfair to the Global South, making places that are mostly trees, snow, and better-off white people look huge, and the places where most of the world’s population lives look puny”

# Mercator Projection

*Mercator works really great if you're, say, Ferdinand Magellan looking for a compass bearing that will take you around Cape Horn, because all of the latitude and longitude lines and angles in between lay out nice and straight on the map like we experience them in real life. It also works well if you're Google and you want a map image that you can neatly slice up into little squares that your server sends to a customer's browser. North is always up, your hometown doesn't look squished or slanted when you zoom in to it, and everybody's happy.*

# Mercator Puzzle

# Caveat

Only a problem for large areas

Continents

World

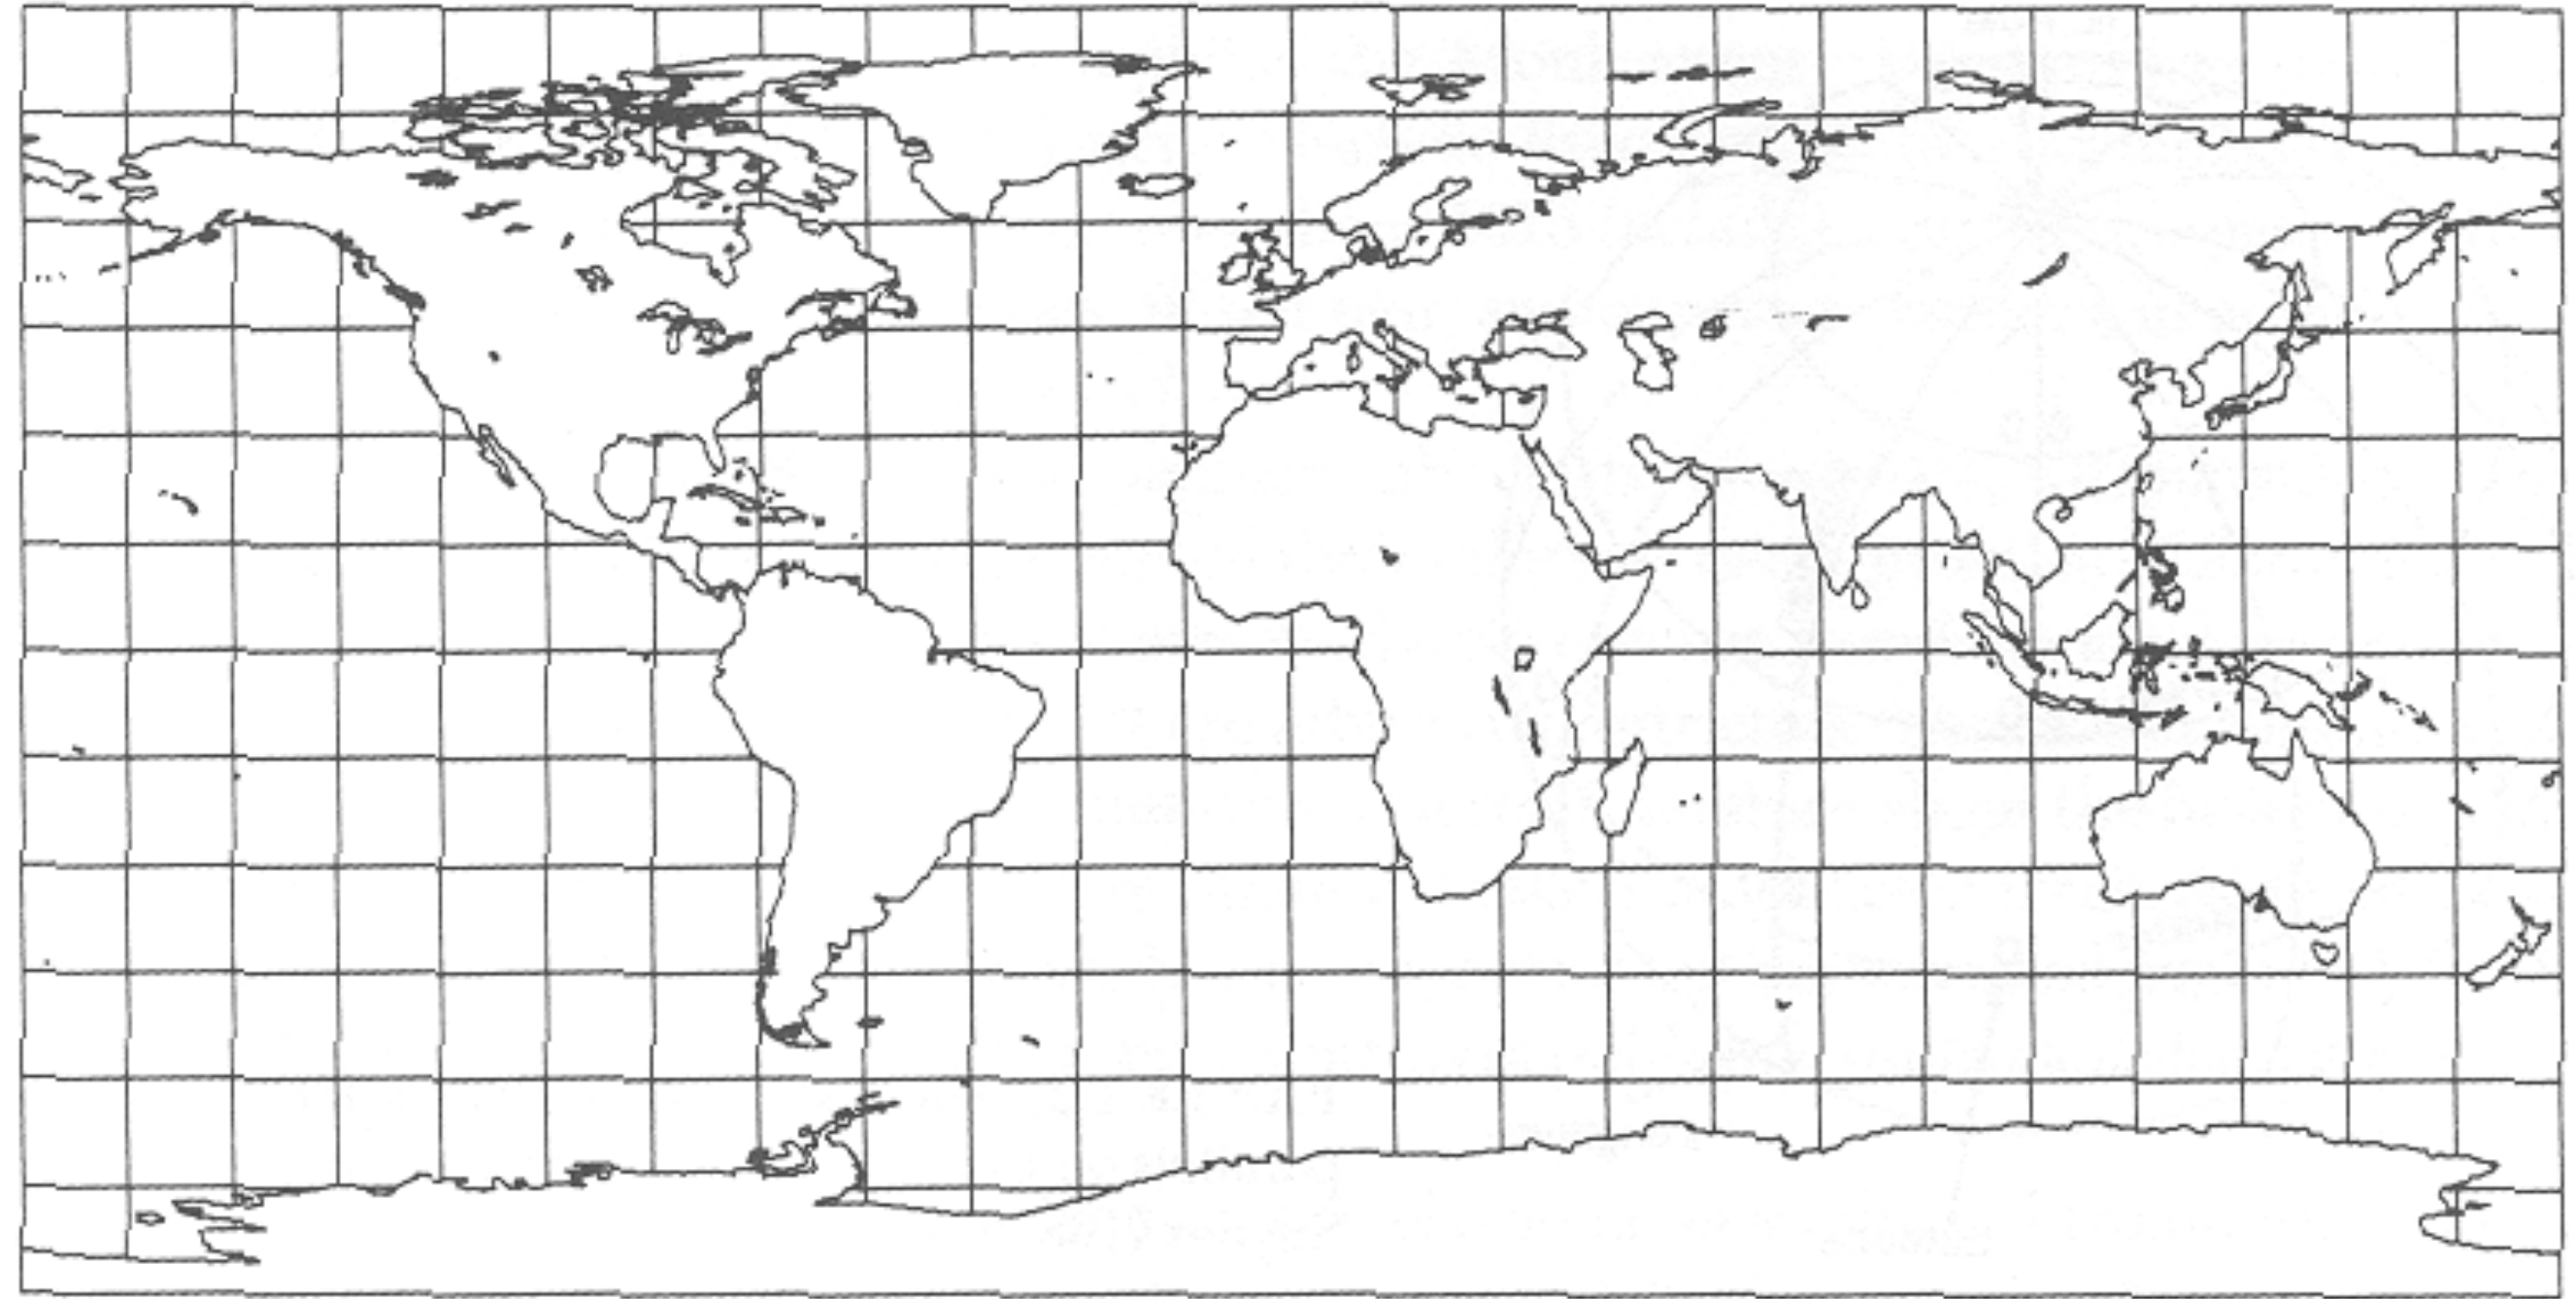

Distortion is not a problem on a state/city level

# Latitude-Longitude

Does not preserve angles

Does not preserve areas

Things are squashed  
at the top and bottom

Snyder, "Flattening the Earth"  
Based on slide from Hanrahan

# Azimuthal Projections

Radical Cartography

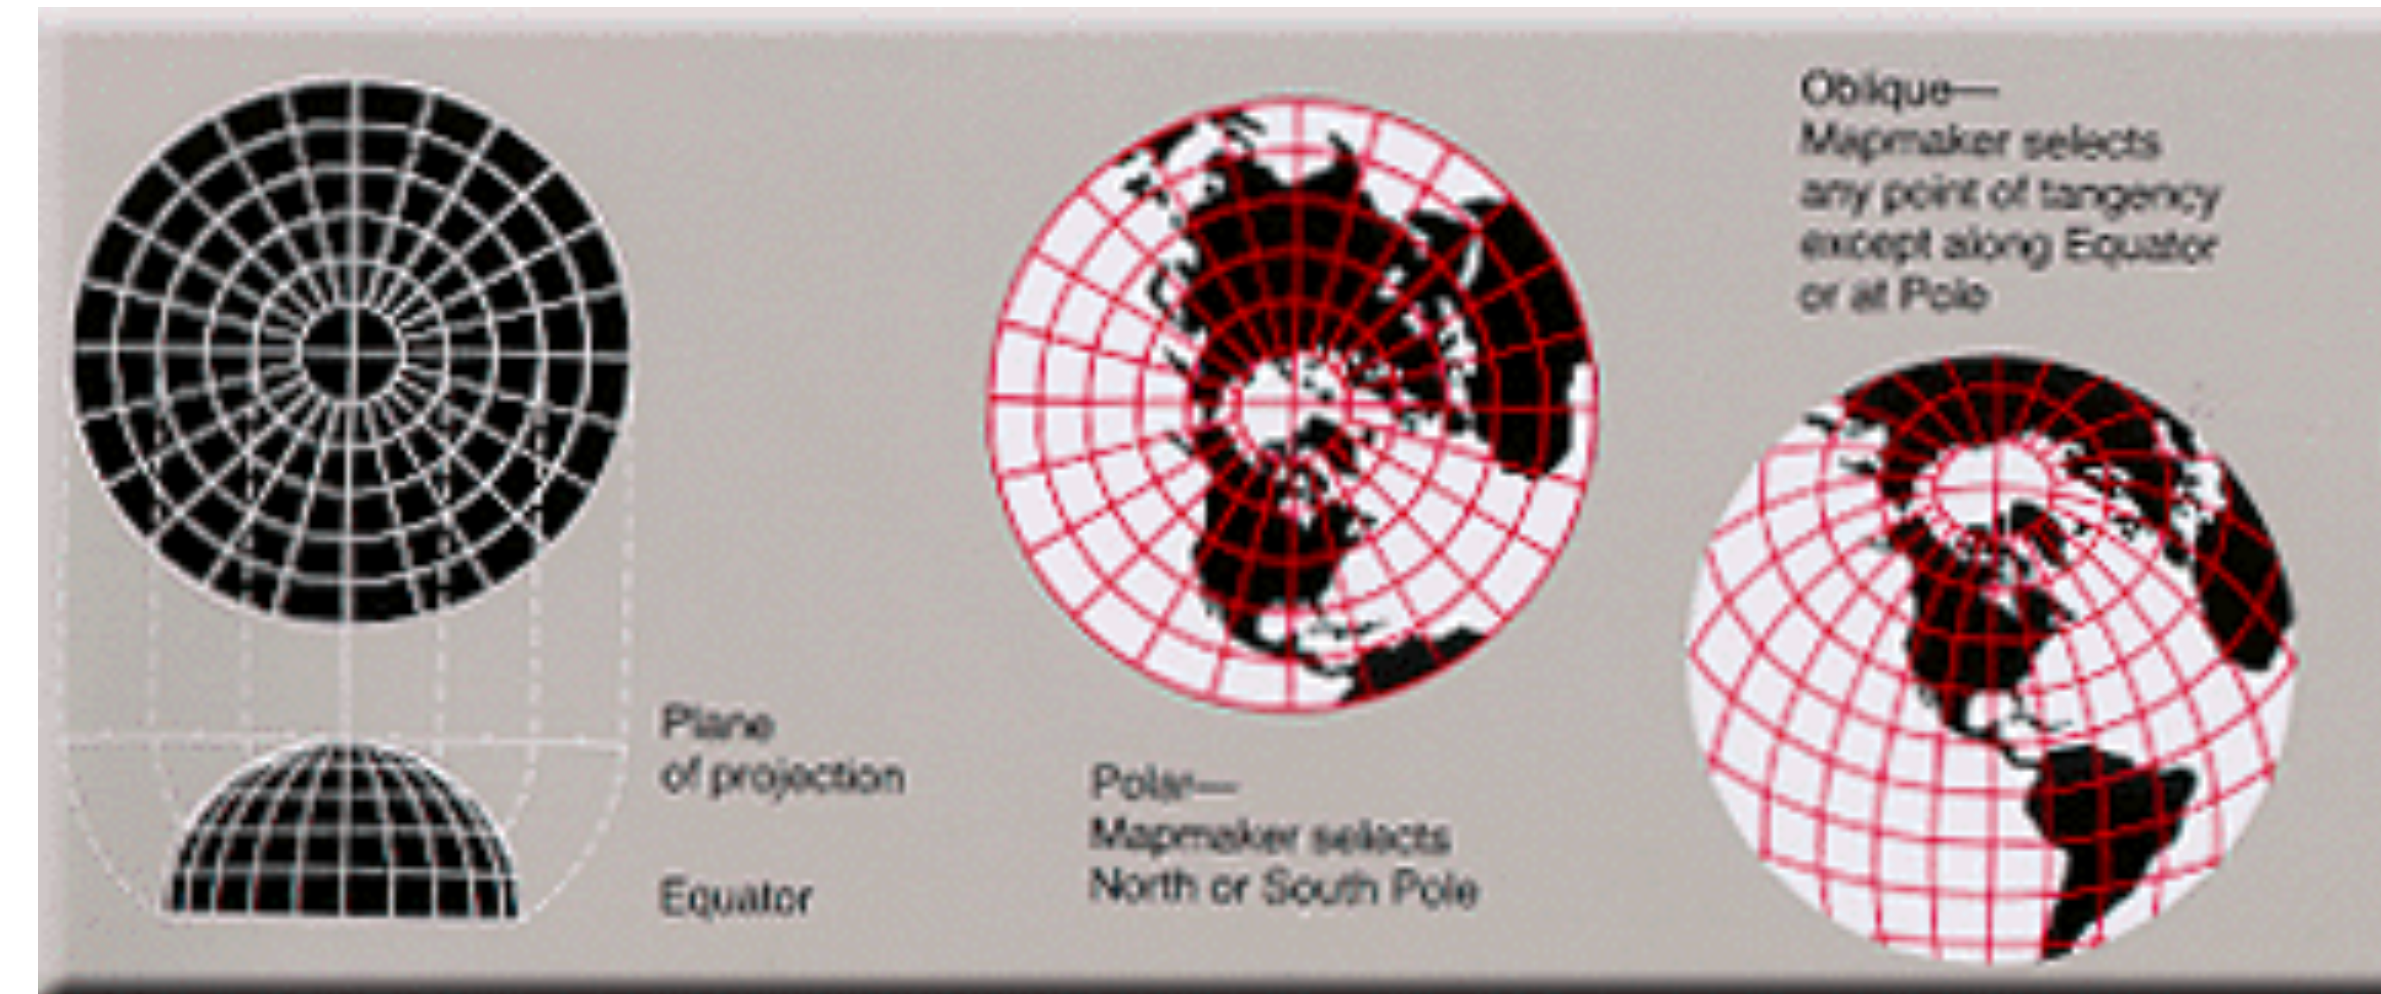

Projection onto a plane tangent to the Earth

angles are correct around the center point

Great circles through the center are straight lines

Radii correspond to true distances

Sometimes see this in airline magazine centered around the hub

# Azimuthal Equidistant

D3 / M.  
Bostock

# ON ASSIGNMENT

In Reykjavik and Rio, New Delhi and Khartoum, Calcutta, Capetown, Sydney and Suva, as you read this—in every troubled news-corner of the globe—are one or more of the 300 special correspondents who work for TIME, LIFE and FORTUNE. In the past twelve months alone, their assignments carried them the 1,505,000 miles you see plotted on this map.

Some of these people are reporters, some photographers, some researchers. Two were on an American cruiser off Hawaii when the Japs blasted Pearl Harbor. Two more were in Manila on December 7, now are interned by the Japanese in ancient Santo Tomas University. Still another managed to make Corregidor from the mainland, filed almost daily dispatches all through January and February, last reported that he had finally reached Australia in safety, joined three other TIME - LIFE - FORTUNE correspondents there. Two of these men had made the trip to Australia in a troop ship with an AEF convoy; the third had arrived on a grimy freighter, he its only passenger, high explosives its only cargo.

But this is not a map of adventure. Rather it is an attempt to visualize a hard-working, world-wide research organization—the News and Picture Bureaus of TIME, LIFE and FORTUNE.

The real significance of the map grows out of the hundreds of fact-finding assignments it represents—the millions of words filed—the stories documented with photos, the weeks and months of observation and analysis it plots.

Eighty thousand of the 1,505,000 miles of travel plotted on the map, for example, were covered by Correspondent Allan Michie. The dispatches he filed from Cairo, Tehran, Simla, Singapore, Batavia and Manila were the basis of news stories in the columns of TIME. Documented with pictures taken by a Picture Bureau photographer in the Middle East, several of his pieces ran in LIFE. Back in New York, he assembled the threads of his experiences and first-hand knowledge on the broad pattern of world strategy into the story of *The Coming Battle for Asia* that appeared in FORTUNE for March.

This same mechanism functions similarly as Walter Graebner, head of the London office, returns to New York to report on the European situation for TIME and LIFE and write the story of *British Politics and the War* for the April FORTUNE—as Sherry Mangan heads back from Buenos Aires via Santiago, Lima and Panama — as correspondents file their dispatches from Ireland, Alaska, India and Bataan . . .

These and three hundred other men like them are a part of the world-wide news and picture organization which is constantly serving your editors, with spot news, with background information, with well-documented research.

## TIME—LIFE—FORTUNE

# Winkel Tripel Projection

Modified azimuthal map projection

averaged to cylindrical projection

Minimizing three kinds of distortion:

- area

- direction

- distance

Considered good projection for world maps, endorsed by National Geographic Society, used in Textbooks

# Albers Equal-Area

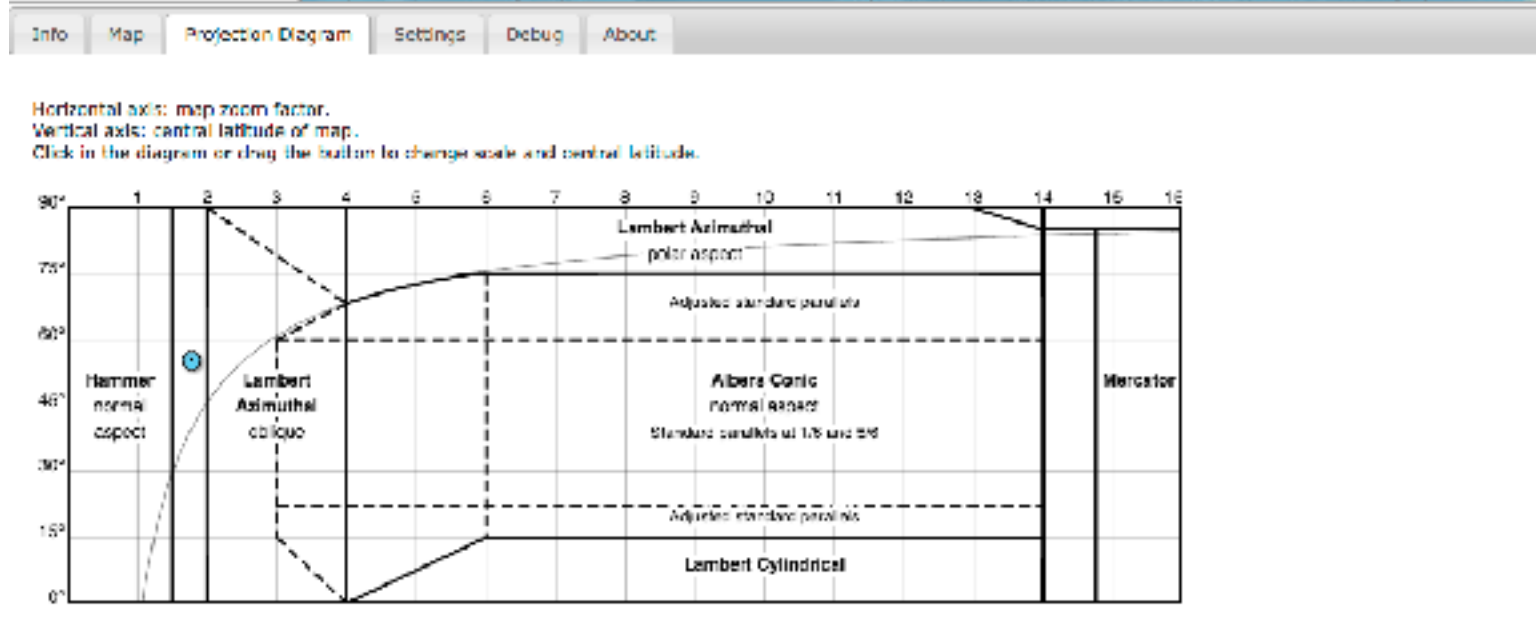

Shows areas correctly

Distorts distances and shapes

# Composite Projections

**CARTOGRAPHY & GEOVISUALIZATION GROUP** Adaptive Composite Map Projections  
An interactive version of the map is available at [www.cartography.com](http://www.cartography.com).

PET PEEVE #208:  
GEOGRAPHIC PROFILE MAPS WHICH ARE  
BASICALLY JUST POPULATION MAPS

# Where We Live...

Unlike many developed countries, the U.S. keeps growing. We are also moving south and west. But compared with China or India, the nation is a vast prairie

Our families are getting smaller—with one vital exception. Compared with those of Europe and Japan, the U.S. population is younger and more colorful because of the continued arrival of immigrants and their higher-than-average birthrates. Of the 100 million Americans who will join us in the next 37 years, half will be immigrants or their children. In the next few decades, 97% of the world's population growth will occur in the developing world; the U.S. is the largest developed country in the world that is still growing at a healthy clip. That matters, strategically, economical-

Ala.; Possum Trot, Ky.; or Lonelyville, N.Y. But they are all probably close to someone's idea of paradise. —By Nancy Gibbs

**80% of the U.S. population lives in a metropolitan area**  
Populations of top five shown

The entire state of Wyoming (pop. 509,300) has fewer people than the Harrisburg, Pa., metro area

3. Chicago metro area (pop. 9,443,400)

4. Philadelphia metro area (pop. 5,823,200)

1. New York City metro area (pop. 18,747,300)

2. Los Angeles metro area (pop. 12,923,500)

New Jersey is the most densely populated state, with 1,134 people per square mile

Loving County, Texas, is the least populated county in the lower 48 states, with 62 residents

Alaska is the most sparsely populated state, with 1 person per square mile

0 1 10 100 1,000 10,000 100,000

*A.A. Mäkijärvi proudly presents:*  
**The Magnificent  
BEARS**  
*of the Glorious Nation of  
FINLAND*  
*Approximately before & after the year 2010*

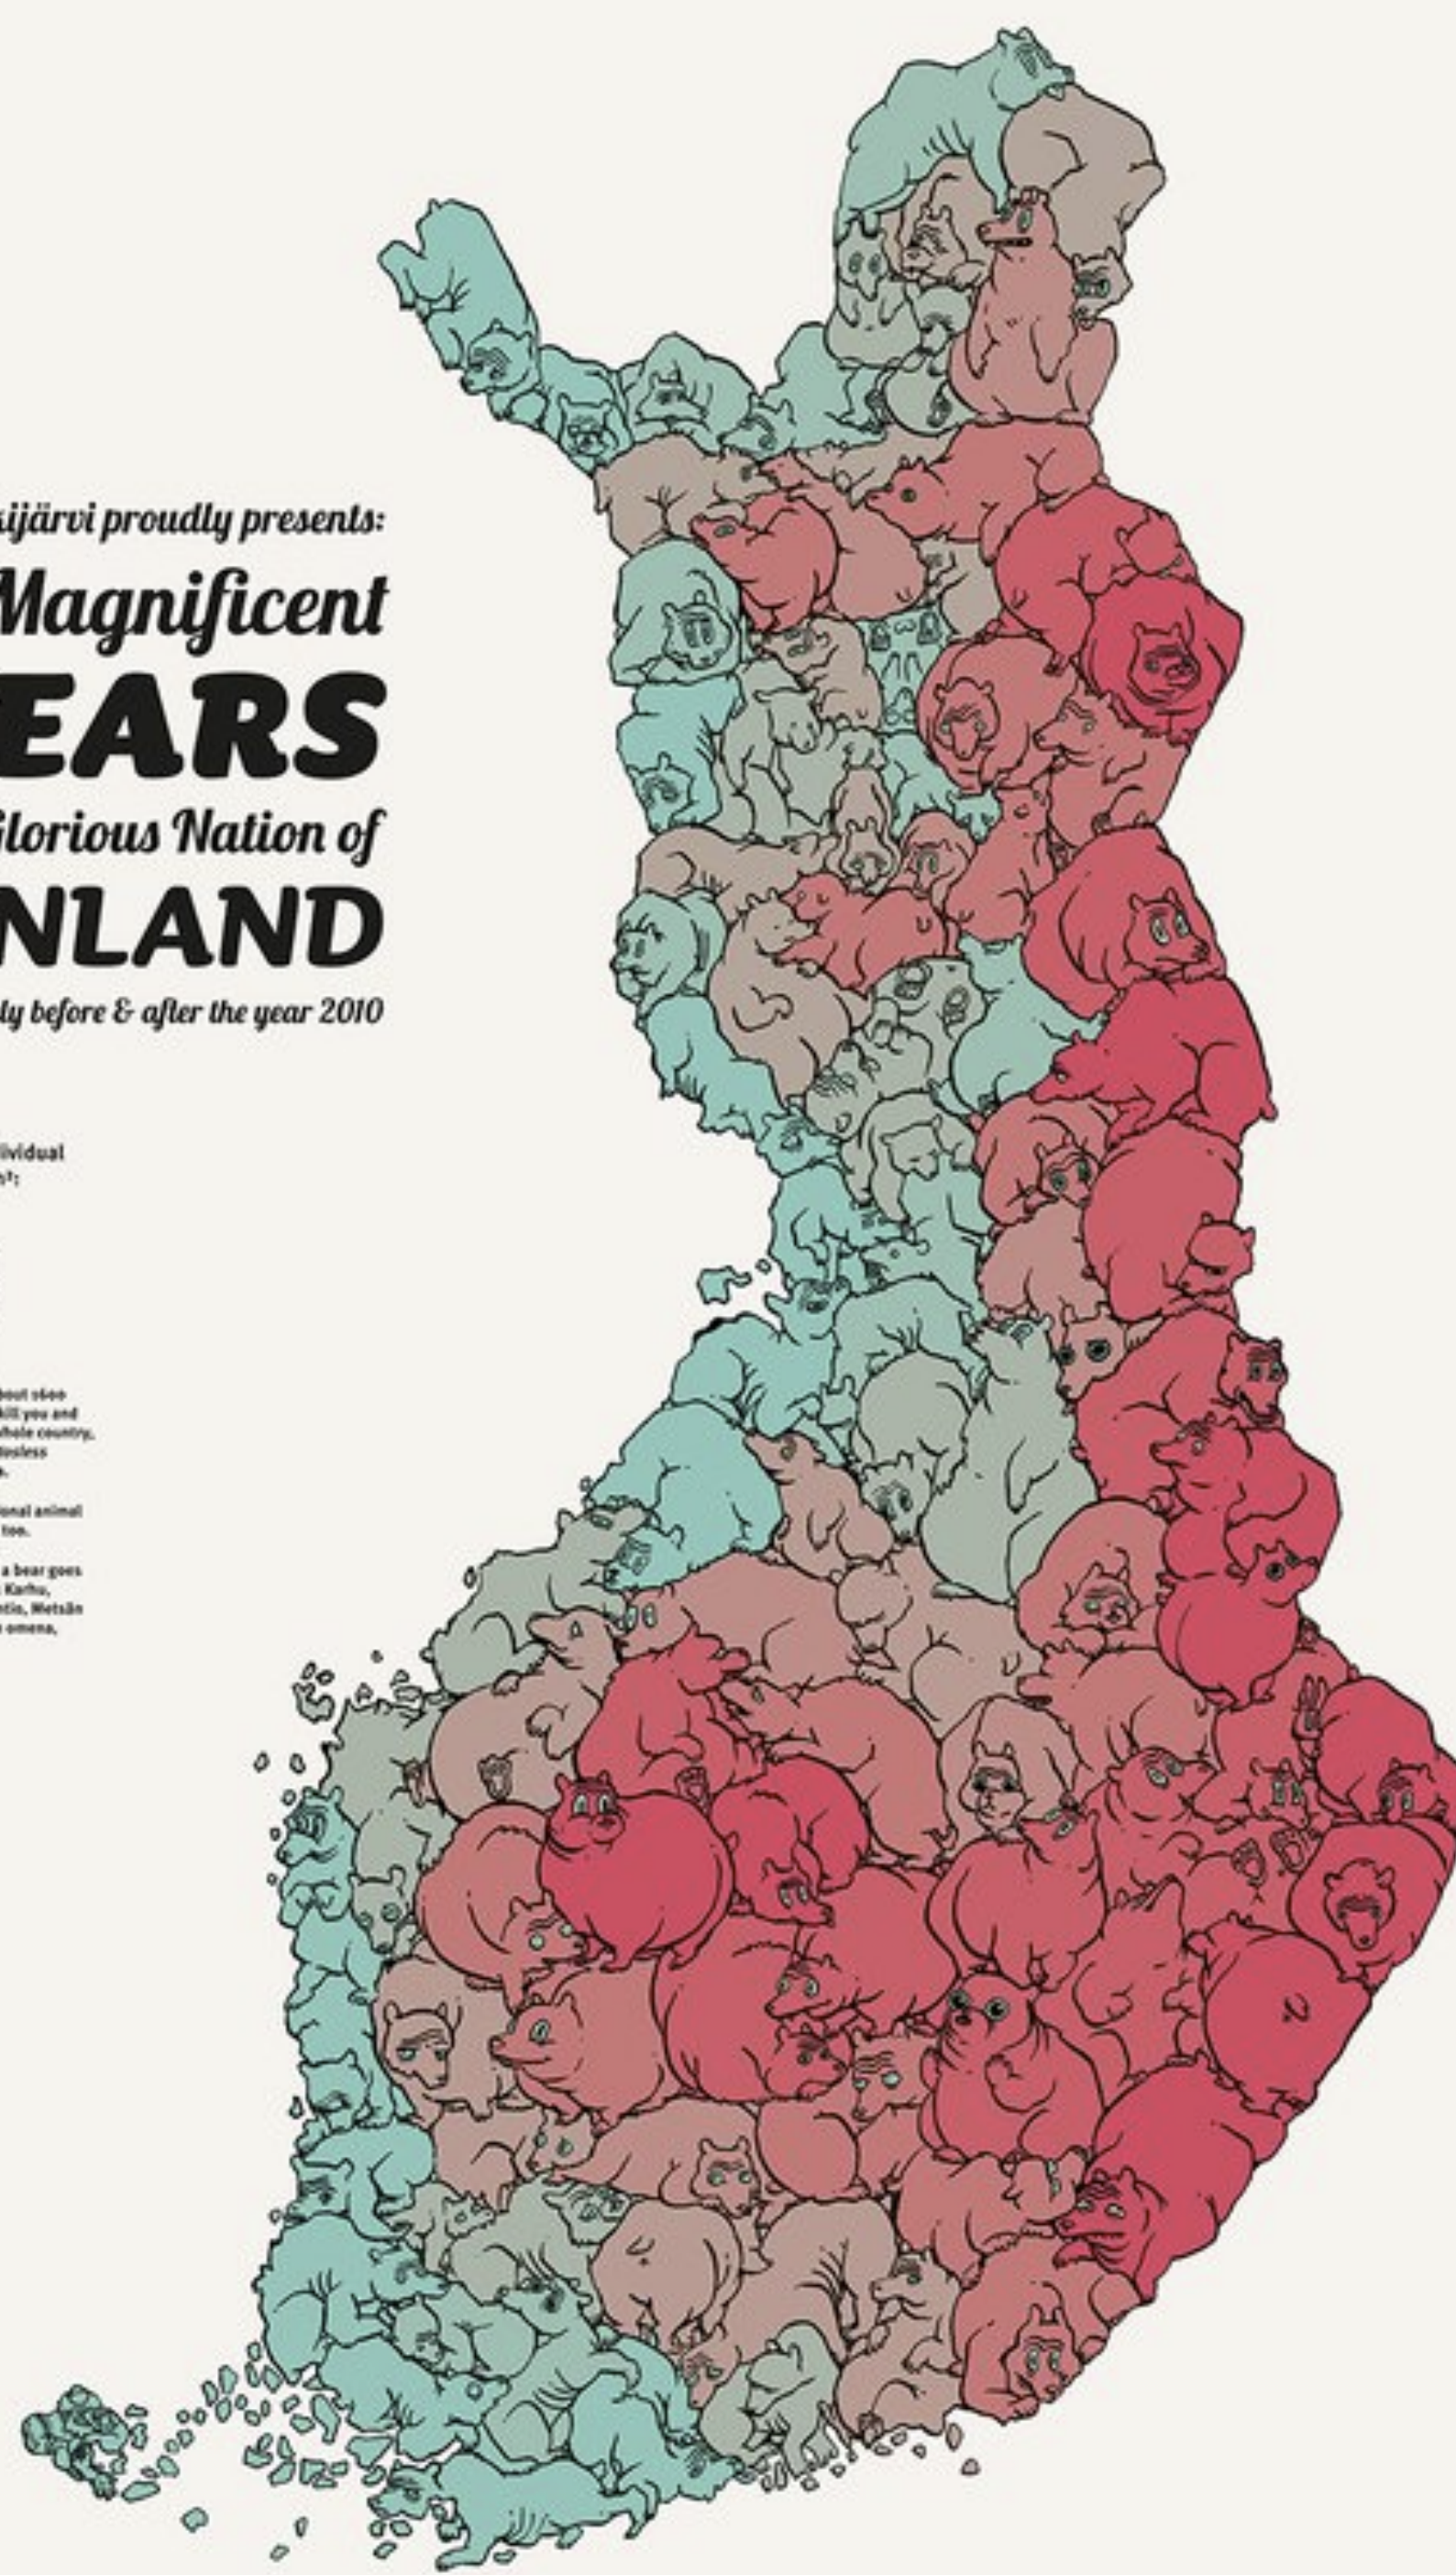

The amount of individual bears per 1000 km<sup>2</sup>:

- 0 - 2,0
- 2,1 - 4,0
- 4,1 - 6,0
- 6,1 - ∞

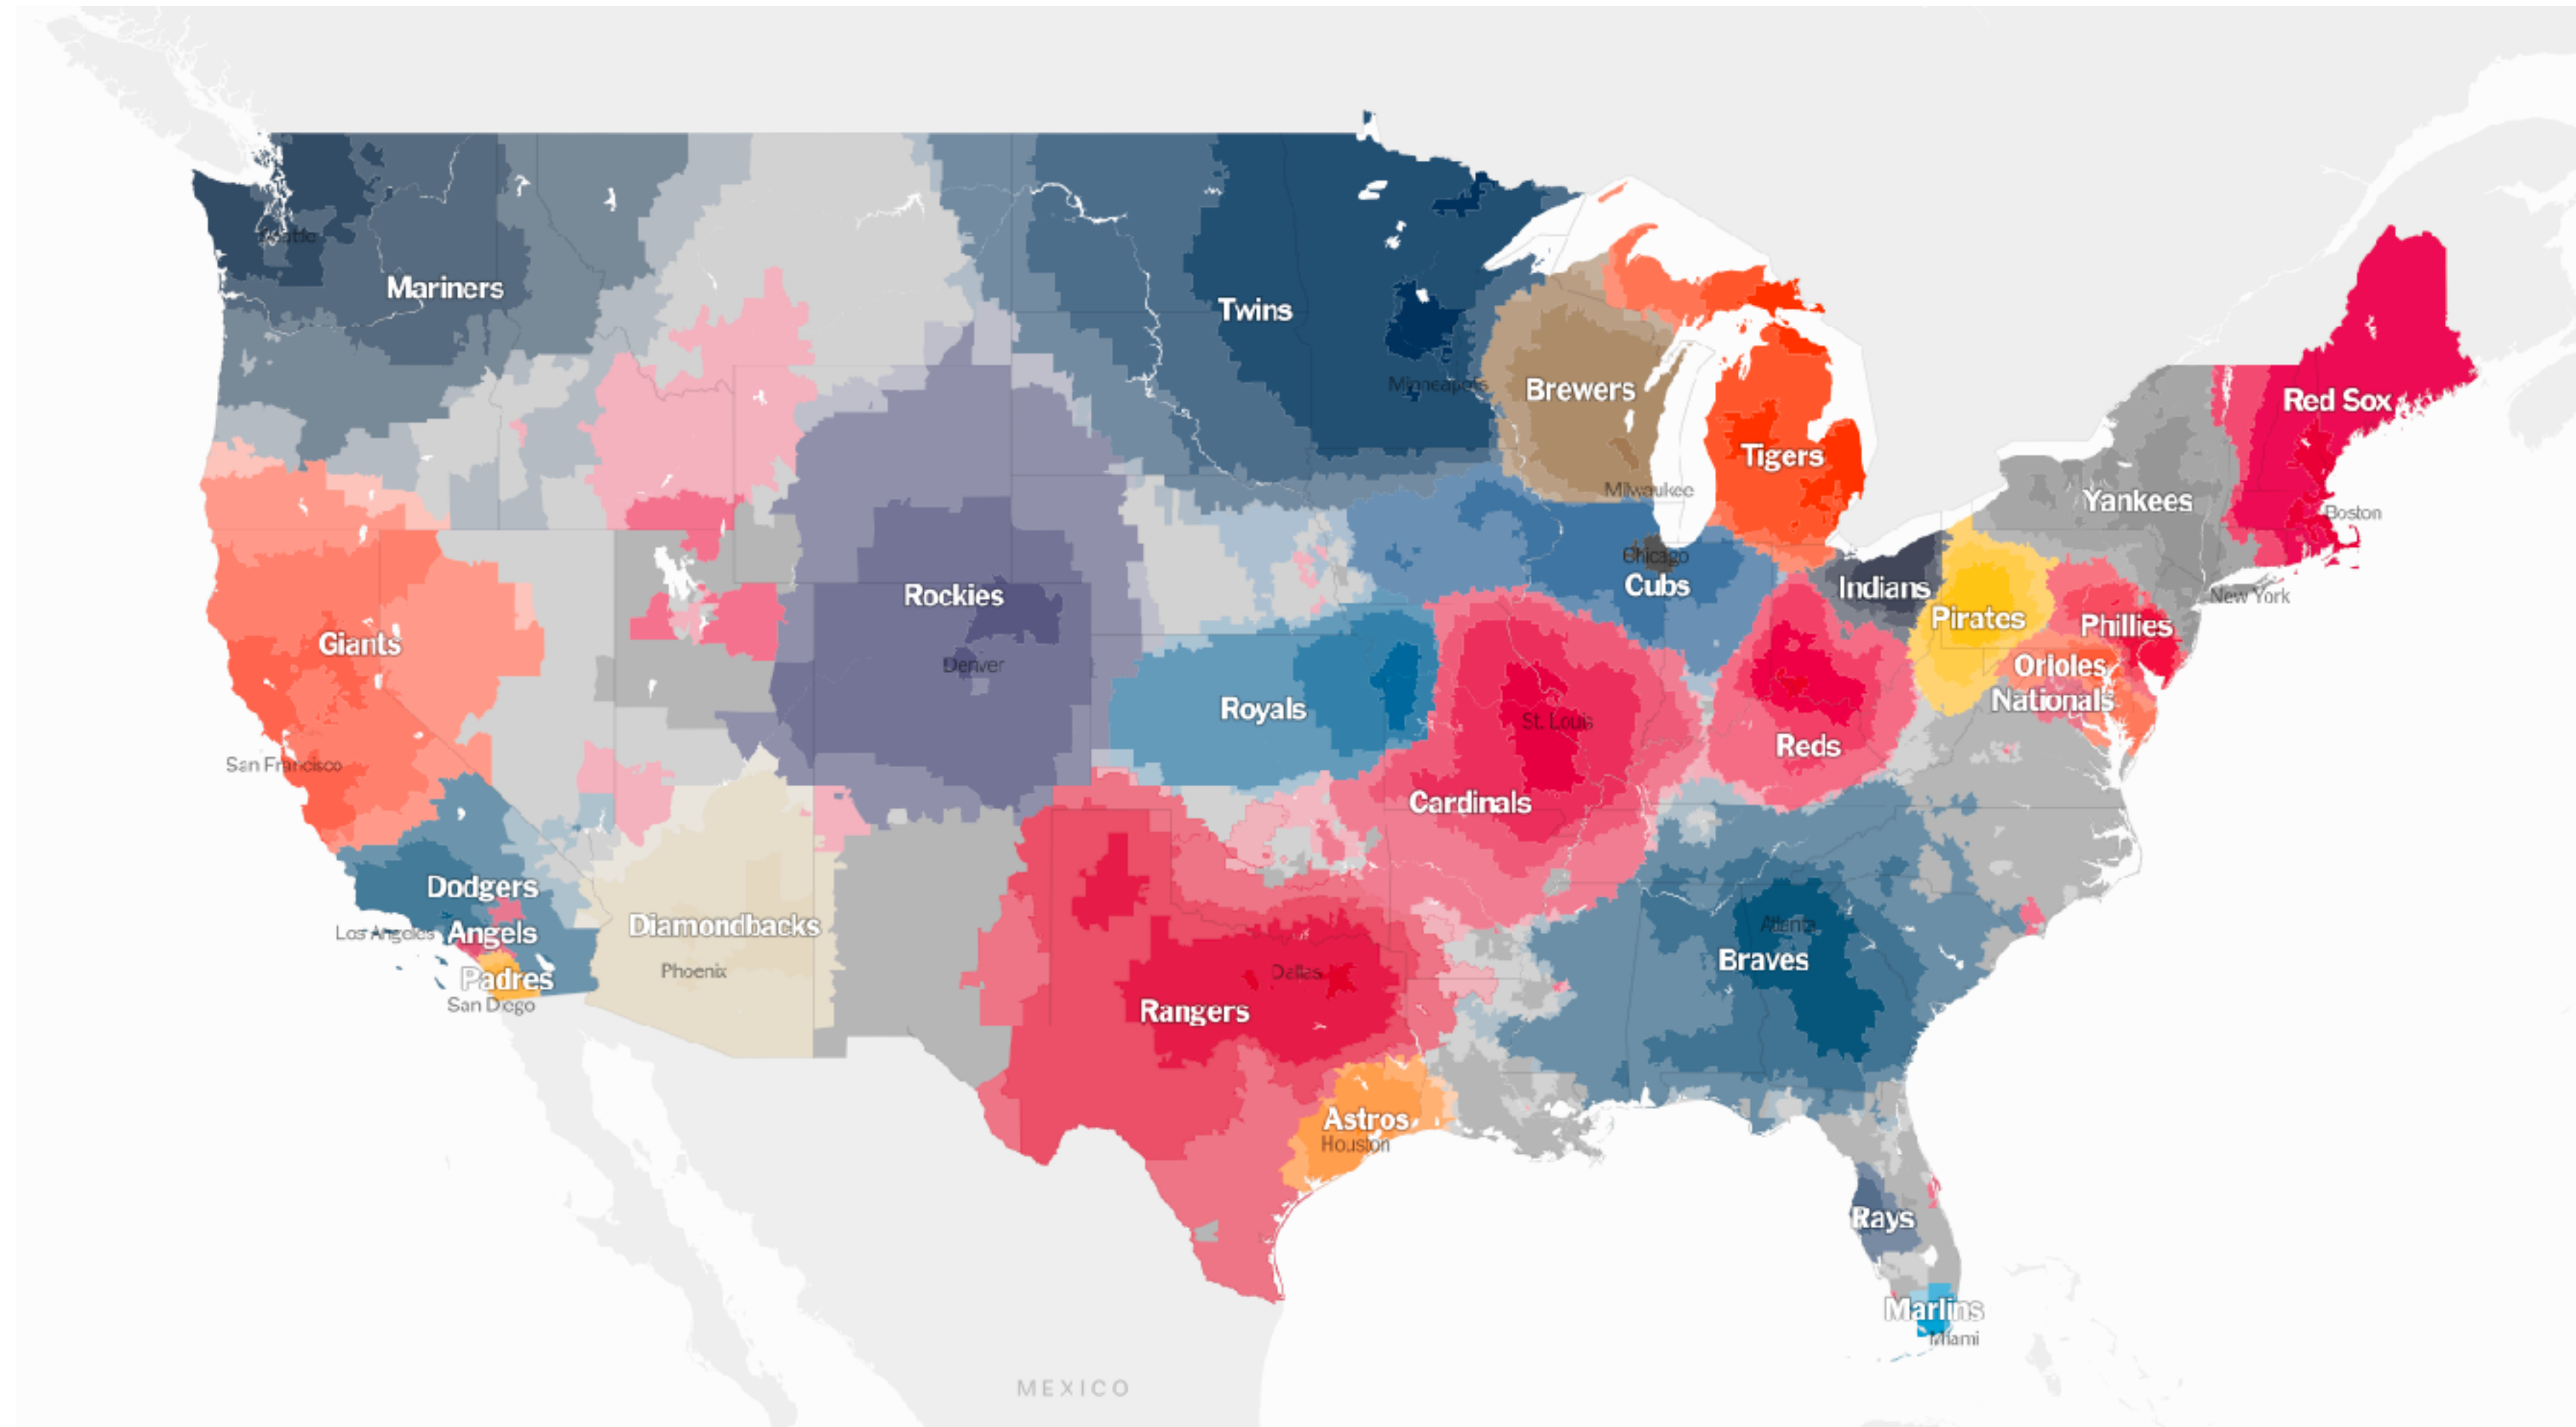

Which means there is about 6000  
graceful bears ready to kill you and  
your loved ones in the whole country,  
excluding the stress-antiseptic  
province of Ahvenanmaa.

Fun fact! Bear is the national animal  
of Finland. And Russia's too.

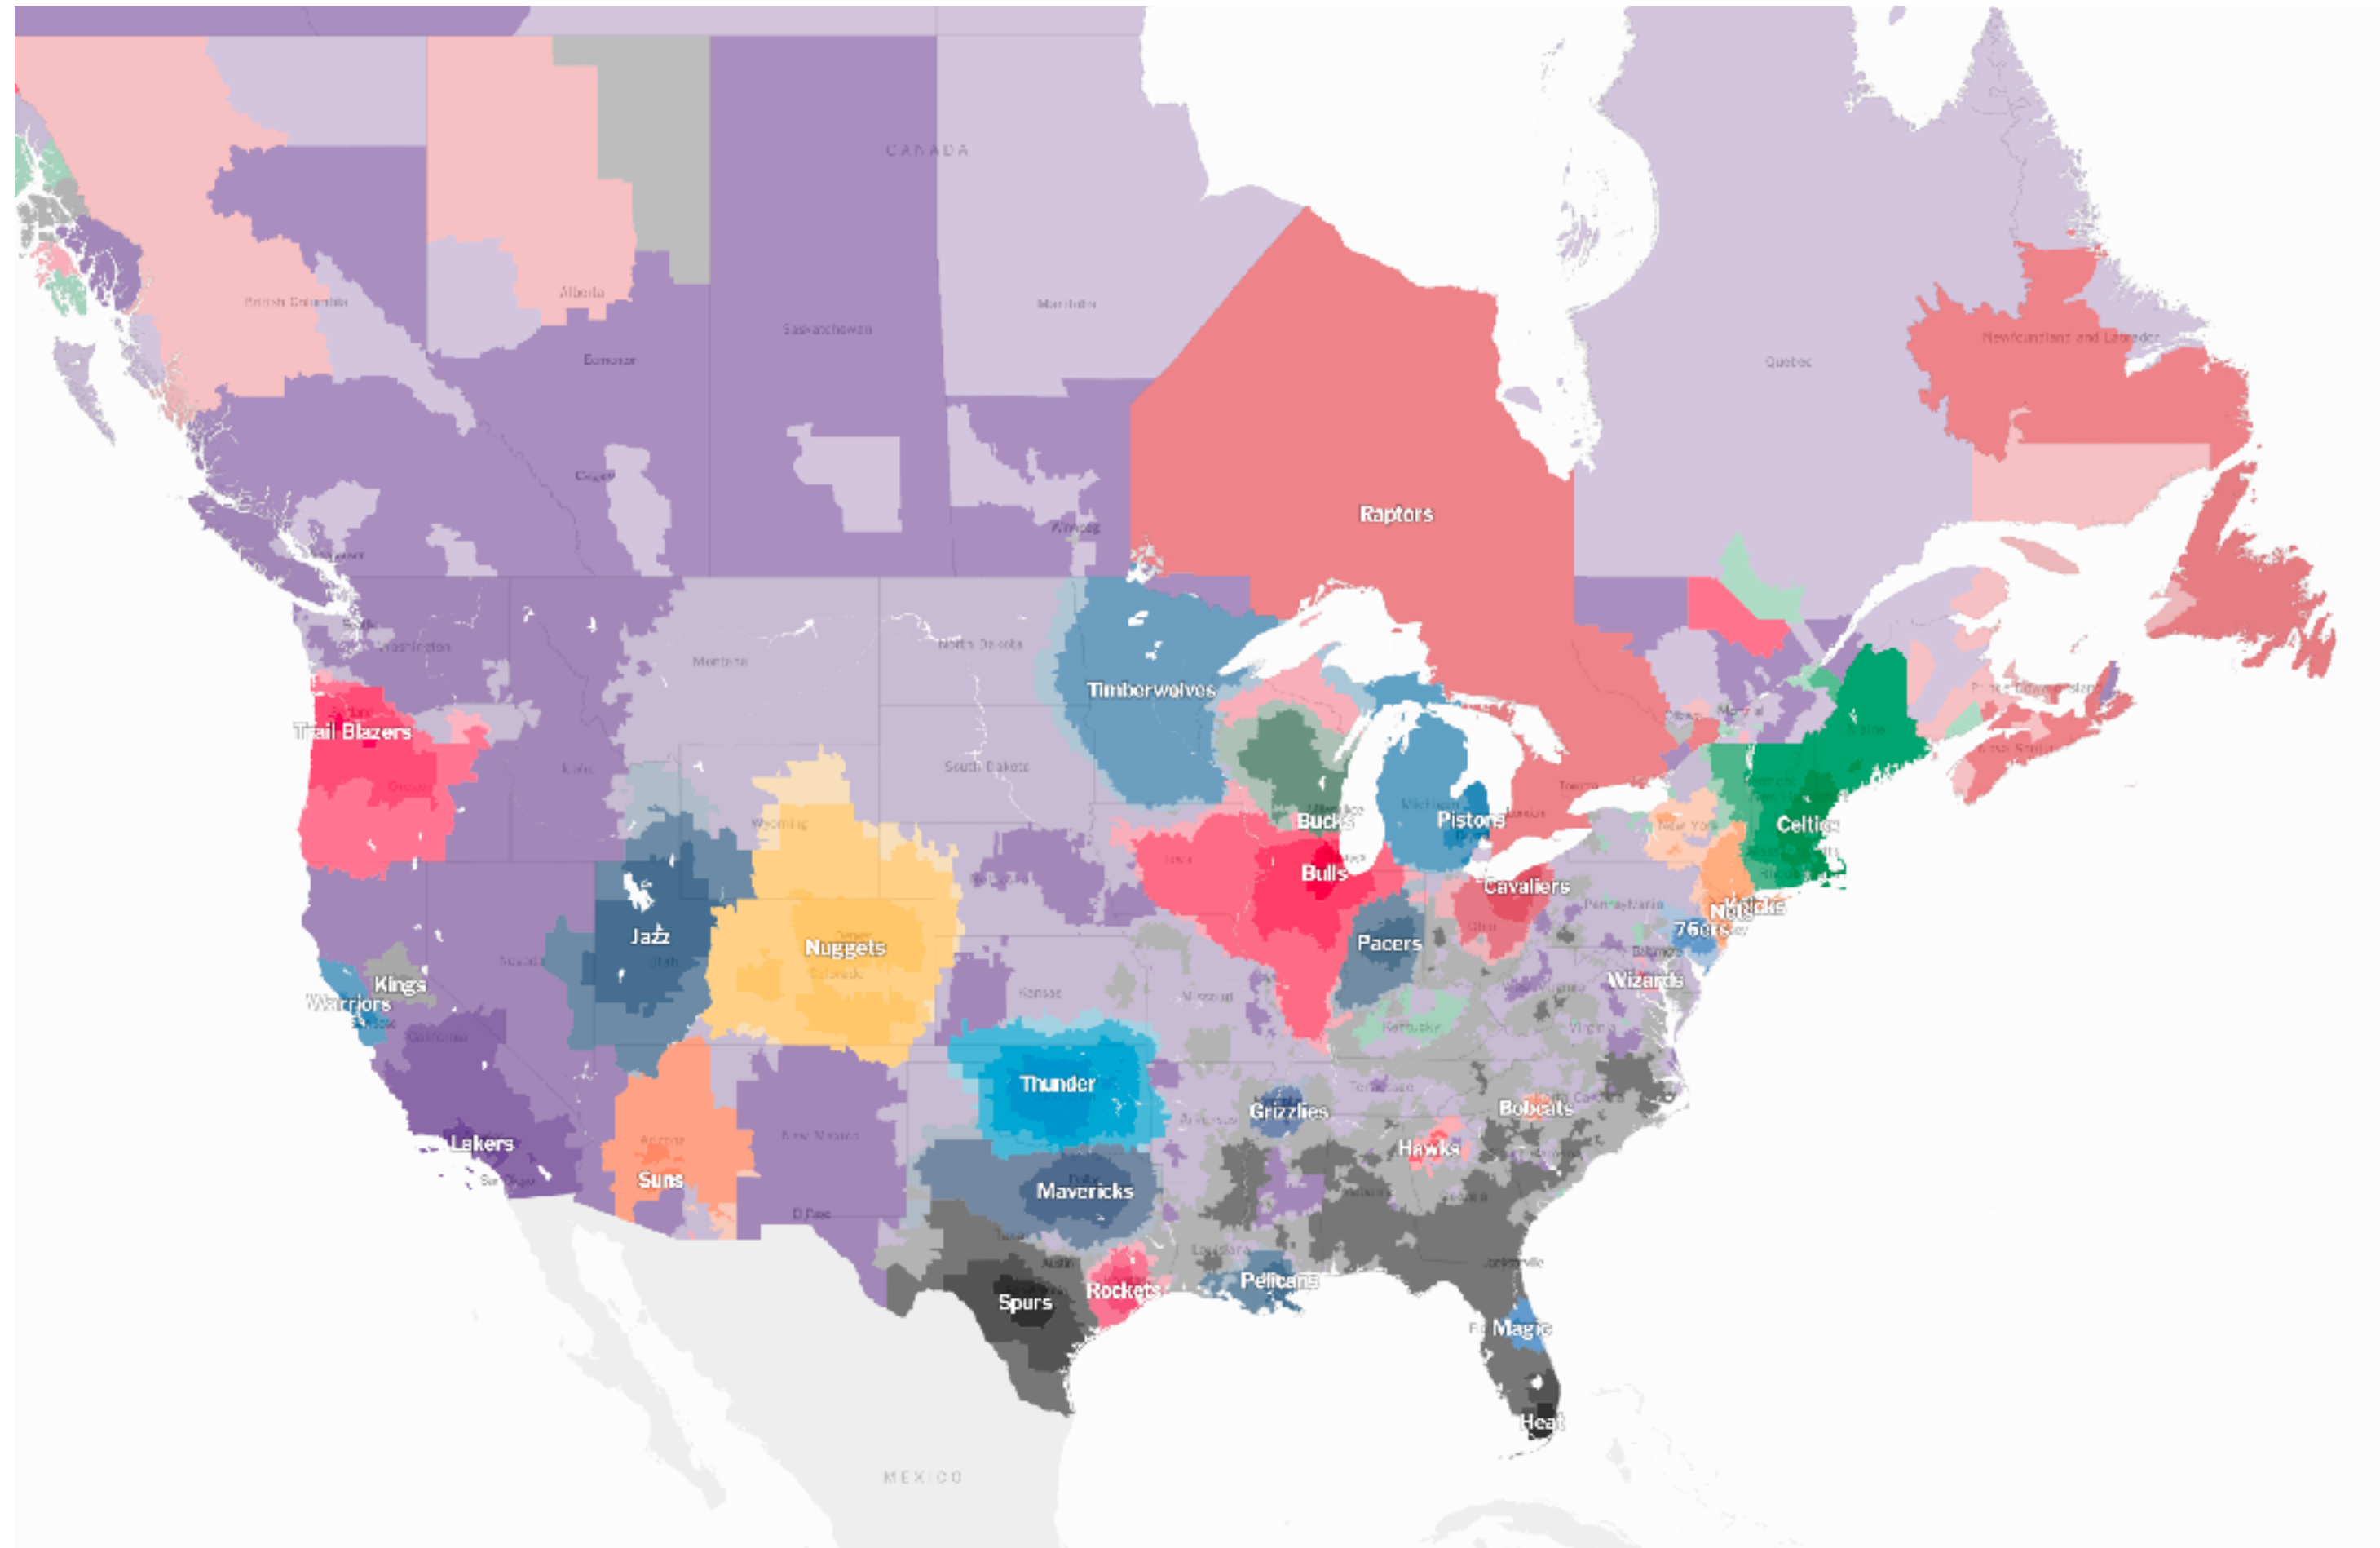

In the Finnish language a bear goes  
by the following names: Karhu,  
Metsäkönny, Ötös, Kosti, Metsän  
kuningas, Kalle, Metsän omene,  
Ötö and Nallukka.

- Inadequate Shelter
- Dentist Visits
- Health Insurance

Have you ever been told by a physician or nurse that you have diabetes?

Note: The survey was conducted over the course of a year from Jan. 2 to Dec. 30, 2010. The number of people surveyed in each district varies, and ranges from 300 to 2,000 people. A sample size of 300 corresponds to a margin of sampling error of ±5.7%. A sample size of 2,000 corresponds to a margin of sampling error of ±2.2%.

# Proportional Symbol Maps

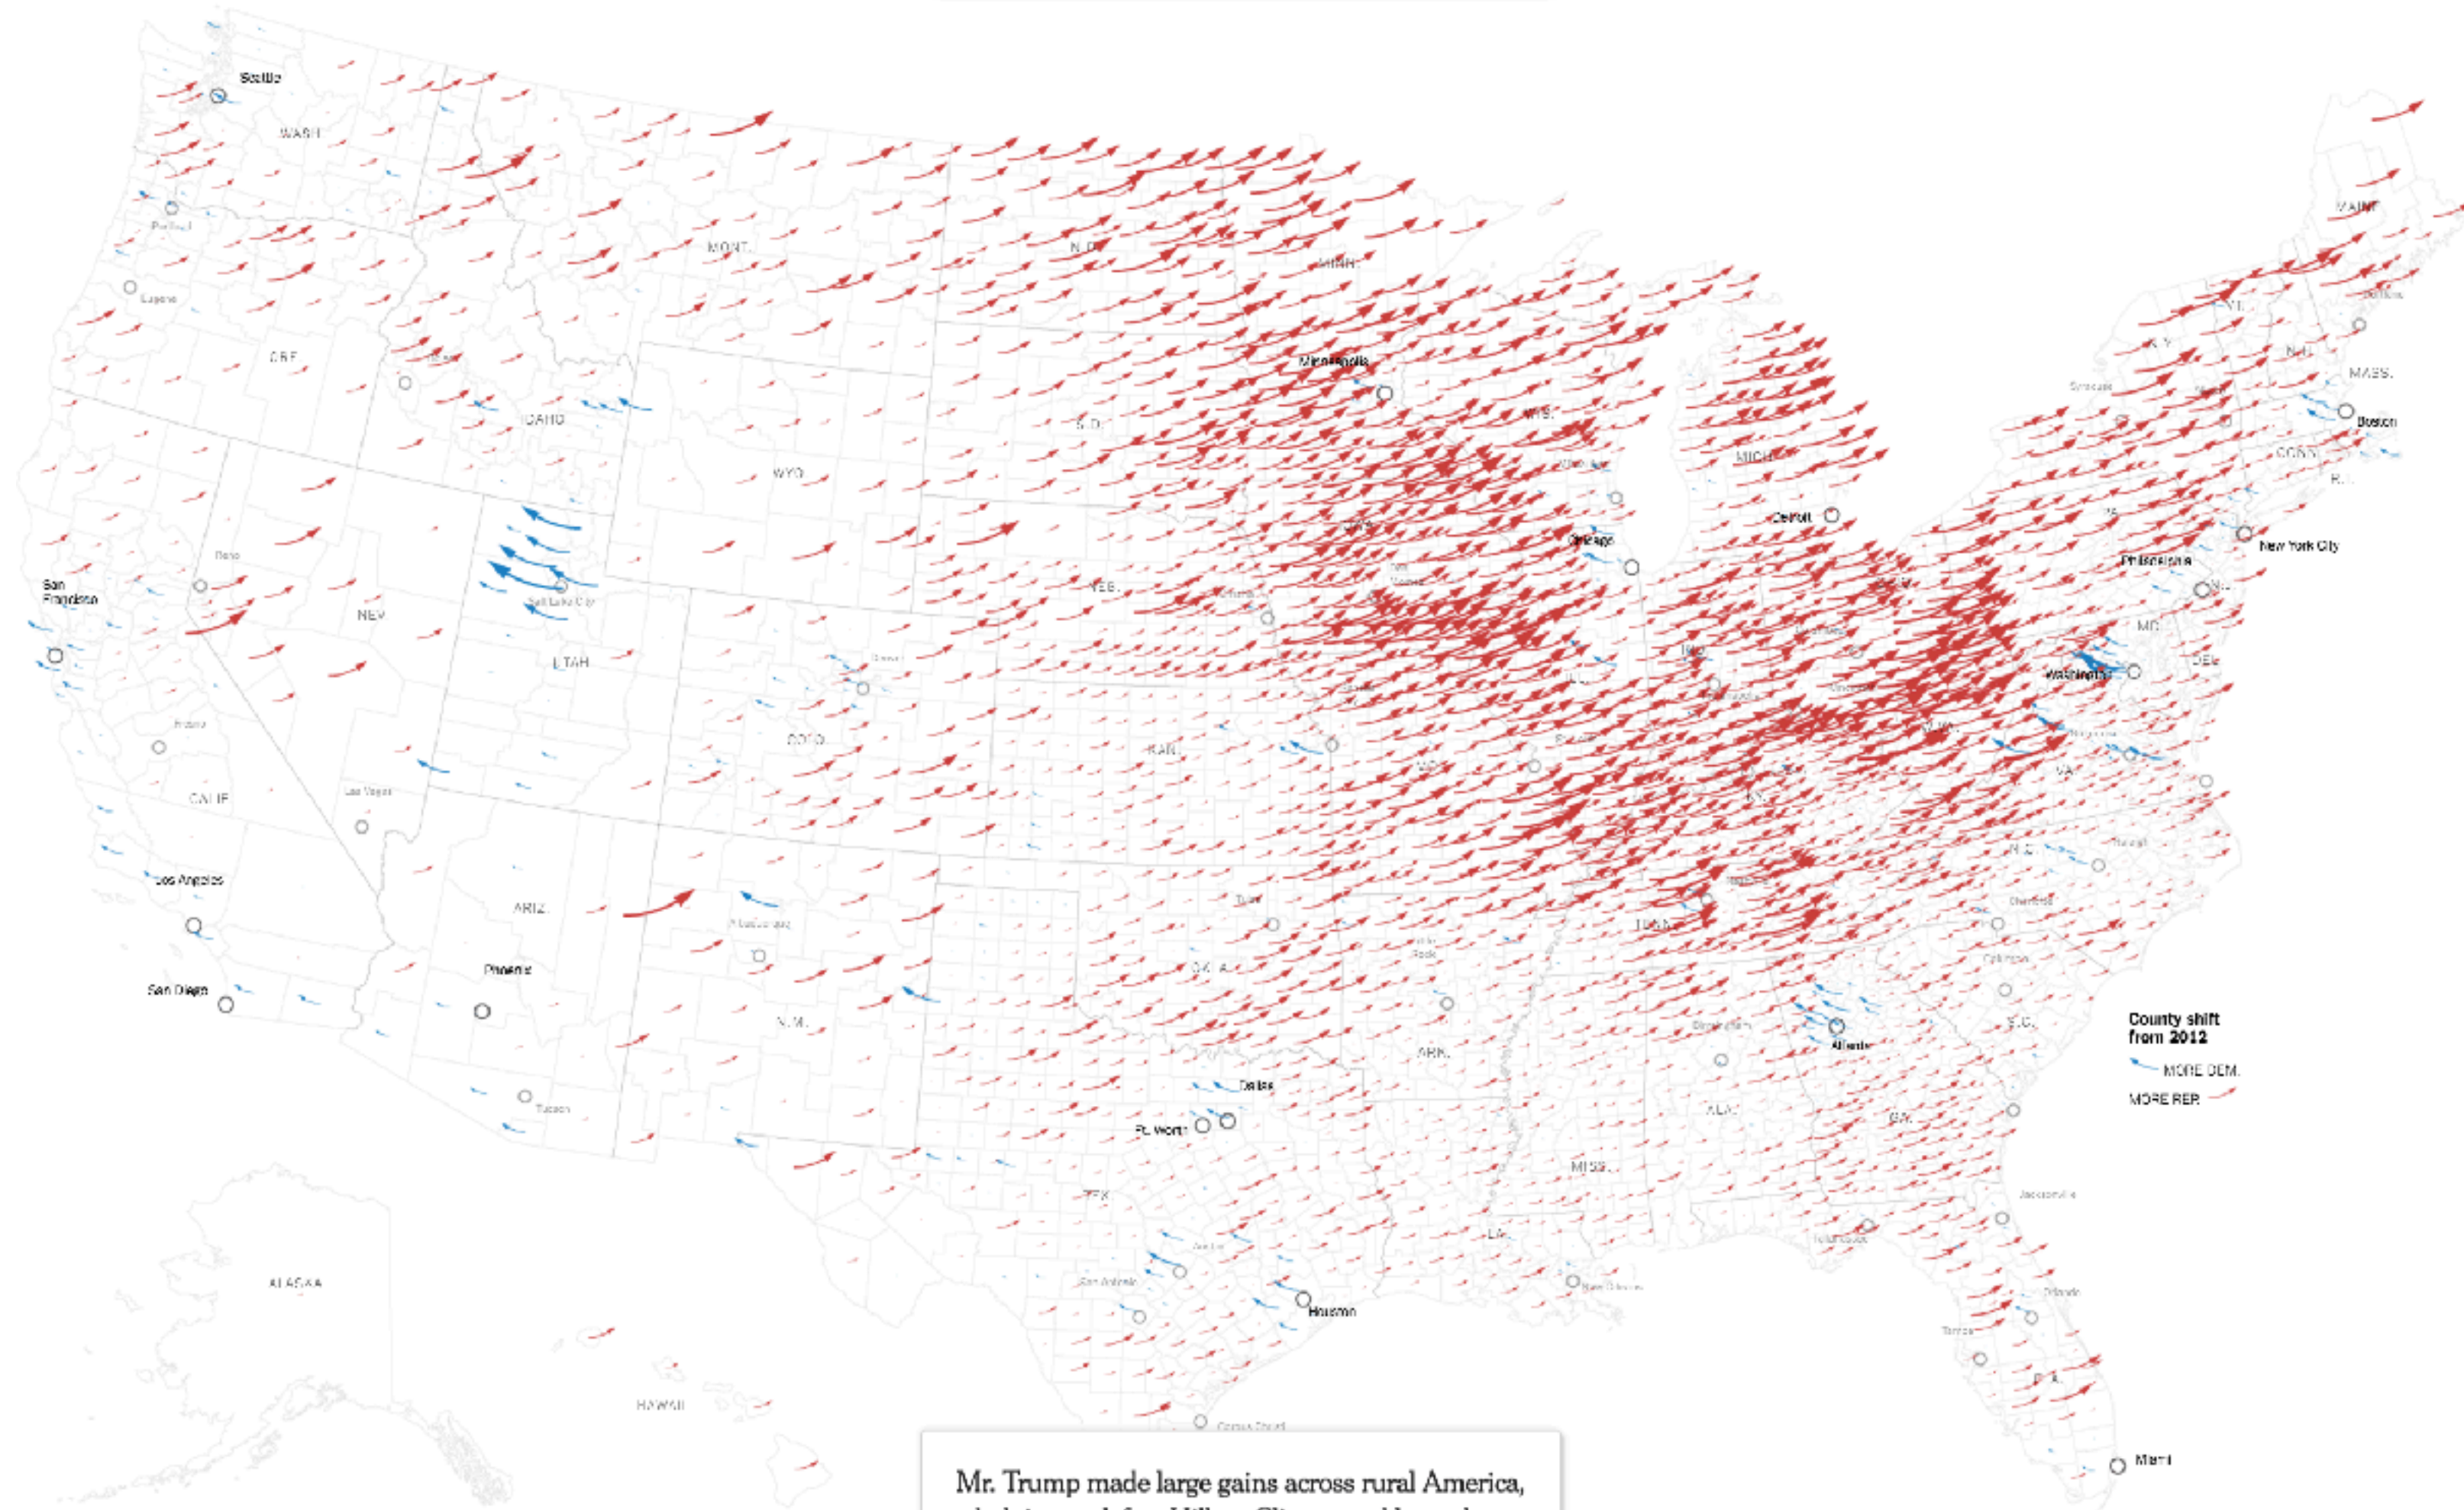

# Alternative to Choropleth

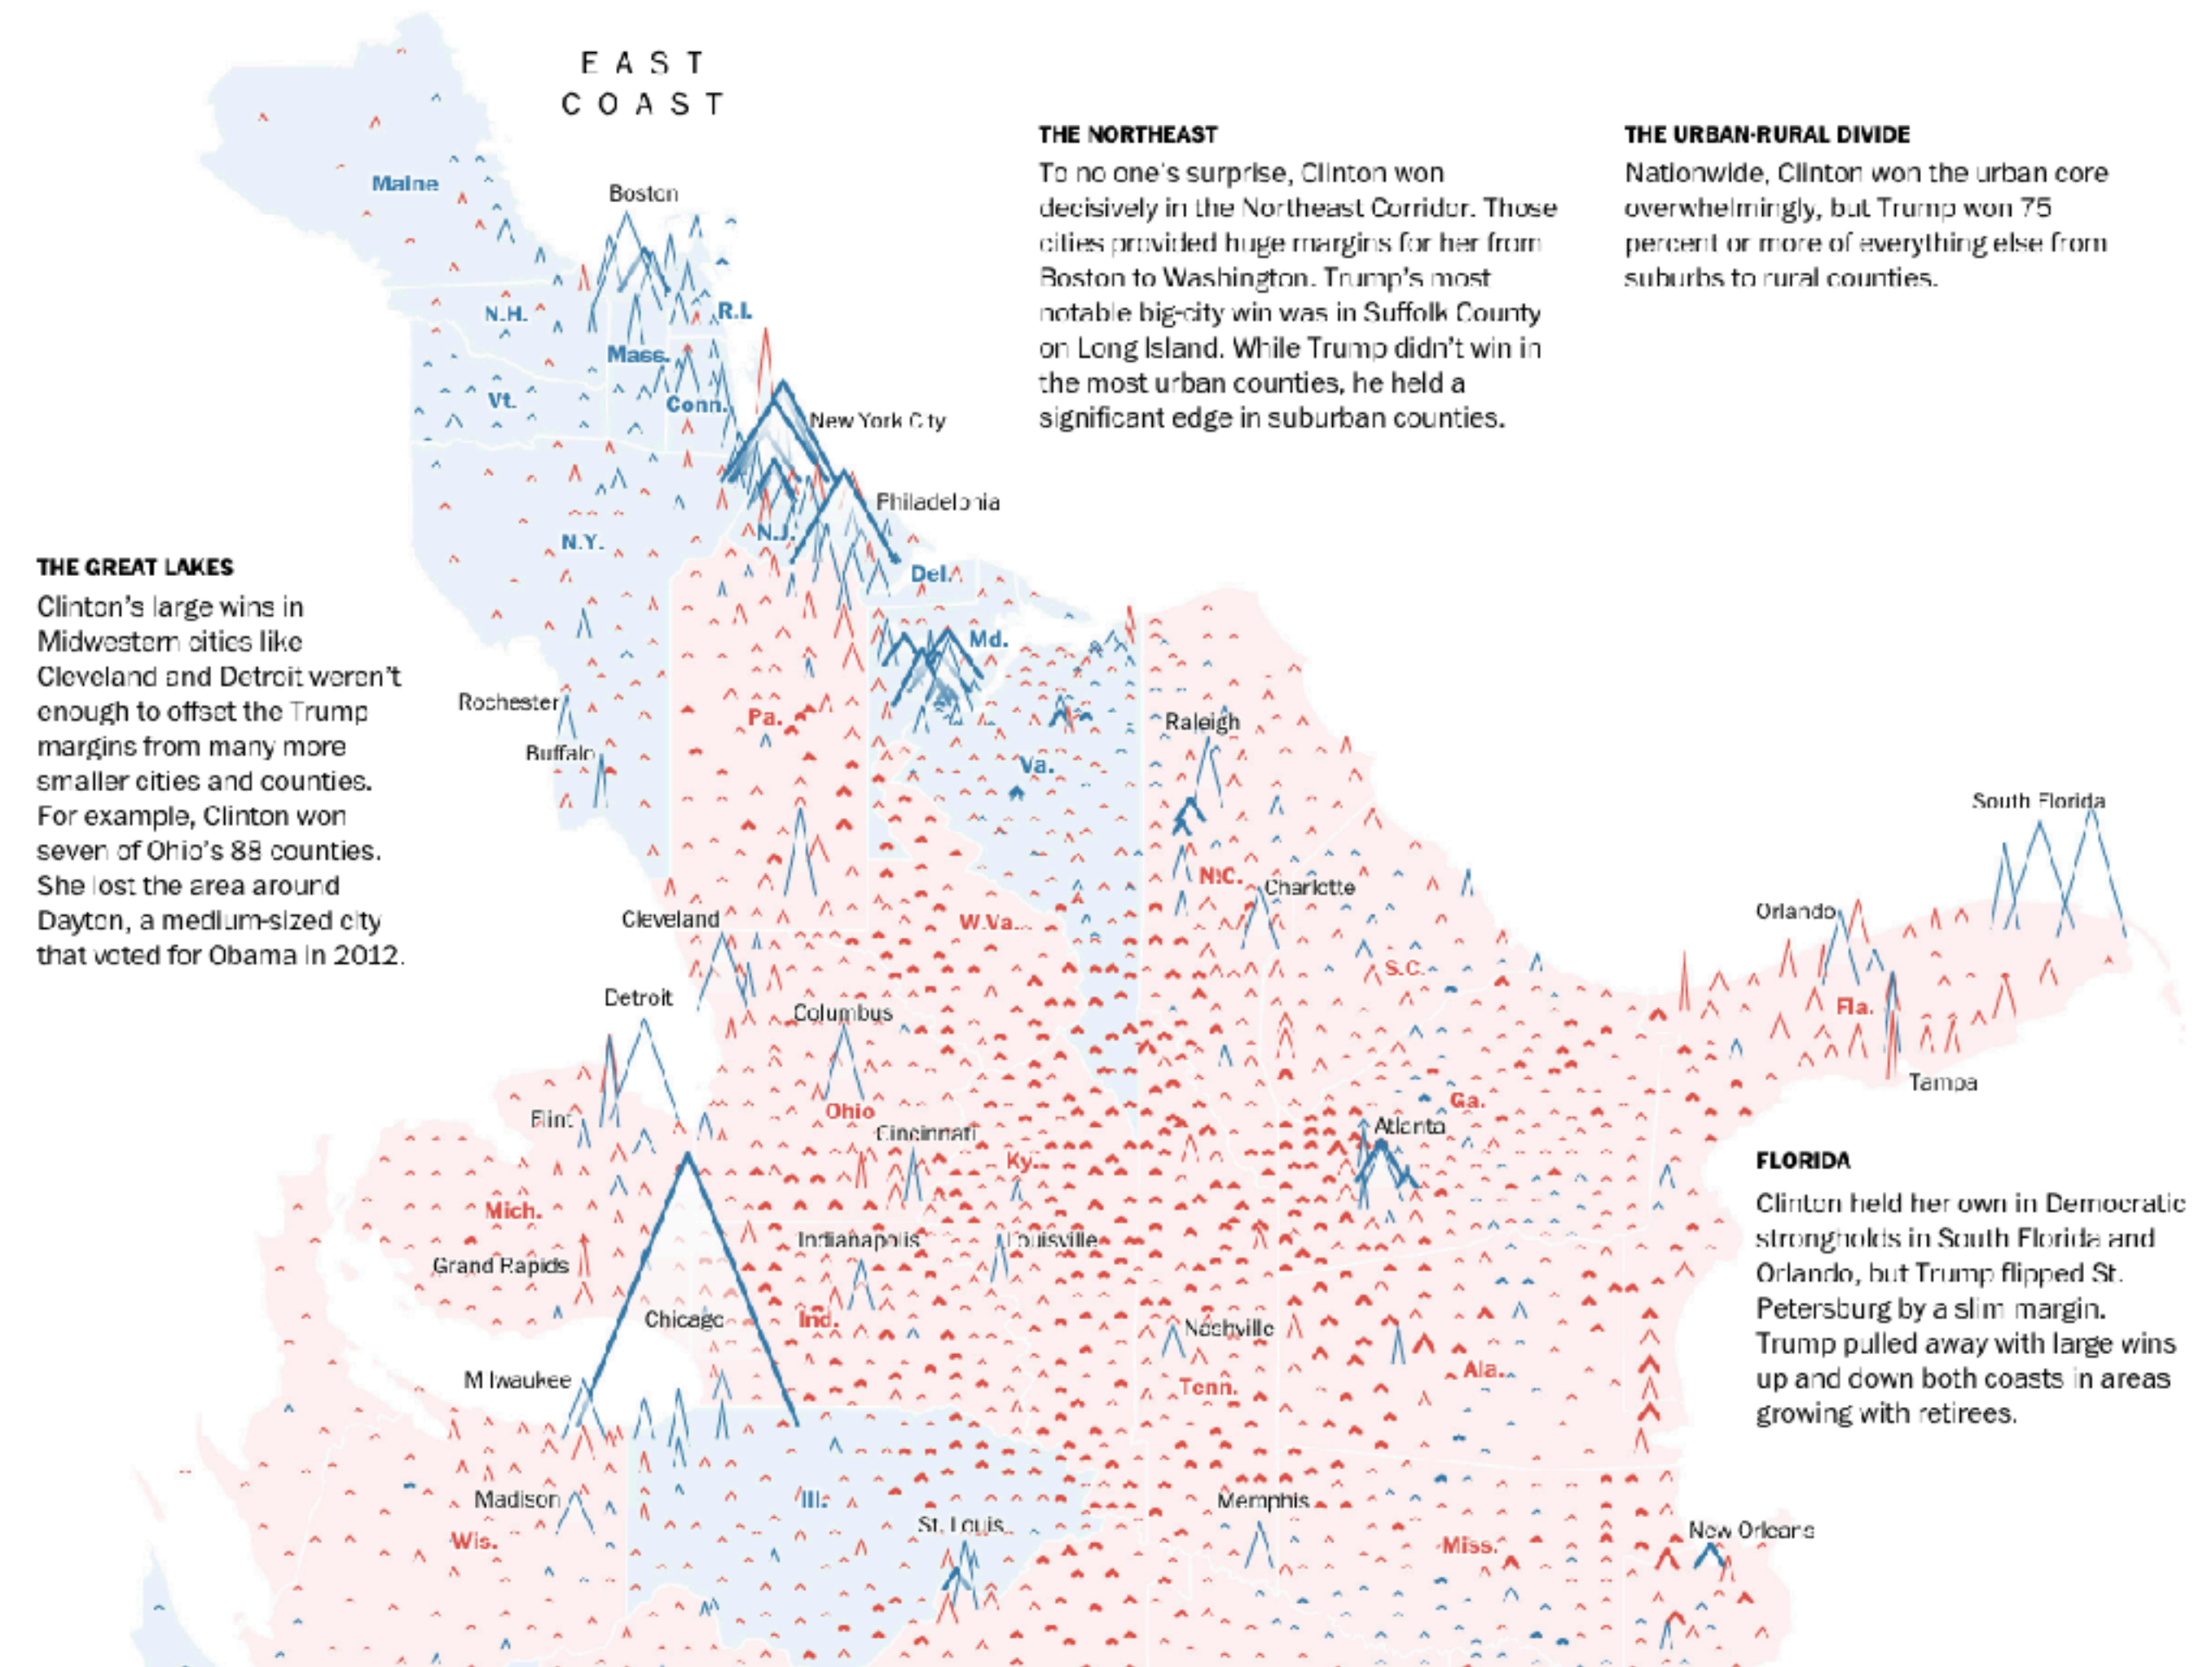

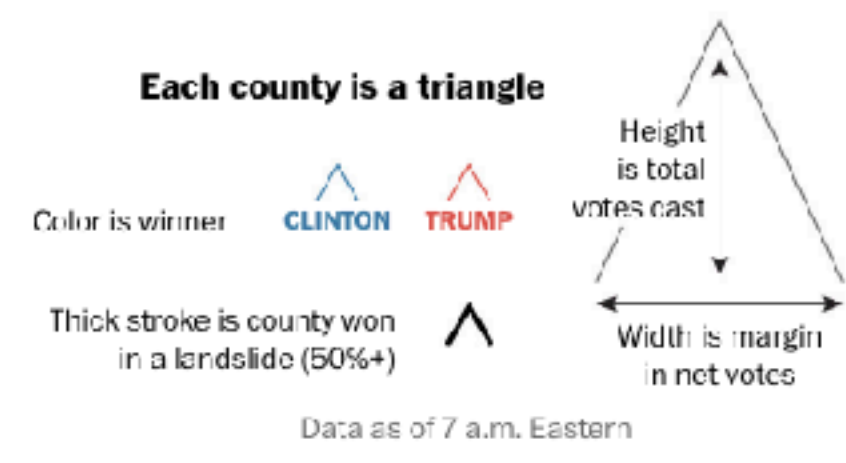

Use a Symbol instead of color

Scale symbol according to data

Mr. Trump made large gains across rural America, helping to defeat Hillary Clinton and her urban supporters.

**EAST COAST**

**THE NORTHEAST**

To no one's surprise, Clinton won decisively in the Northeast Corridor. Those cities provided huge margins for her from Boston to Washington. Trump's most notable big-city win was in Suffolk County on Long Island. While Trump didn't win in the most urban counties, he held a significant edge in suburban counties.

**THE URBAN-RURAL DIVIDE**

Nationwide, Clinton won the urban core overwhelmingly, but Trump won 75 percent or more of everything else from suburbs to rural counties.

**THE GREAT LAKES**

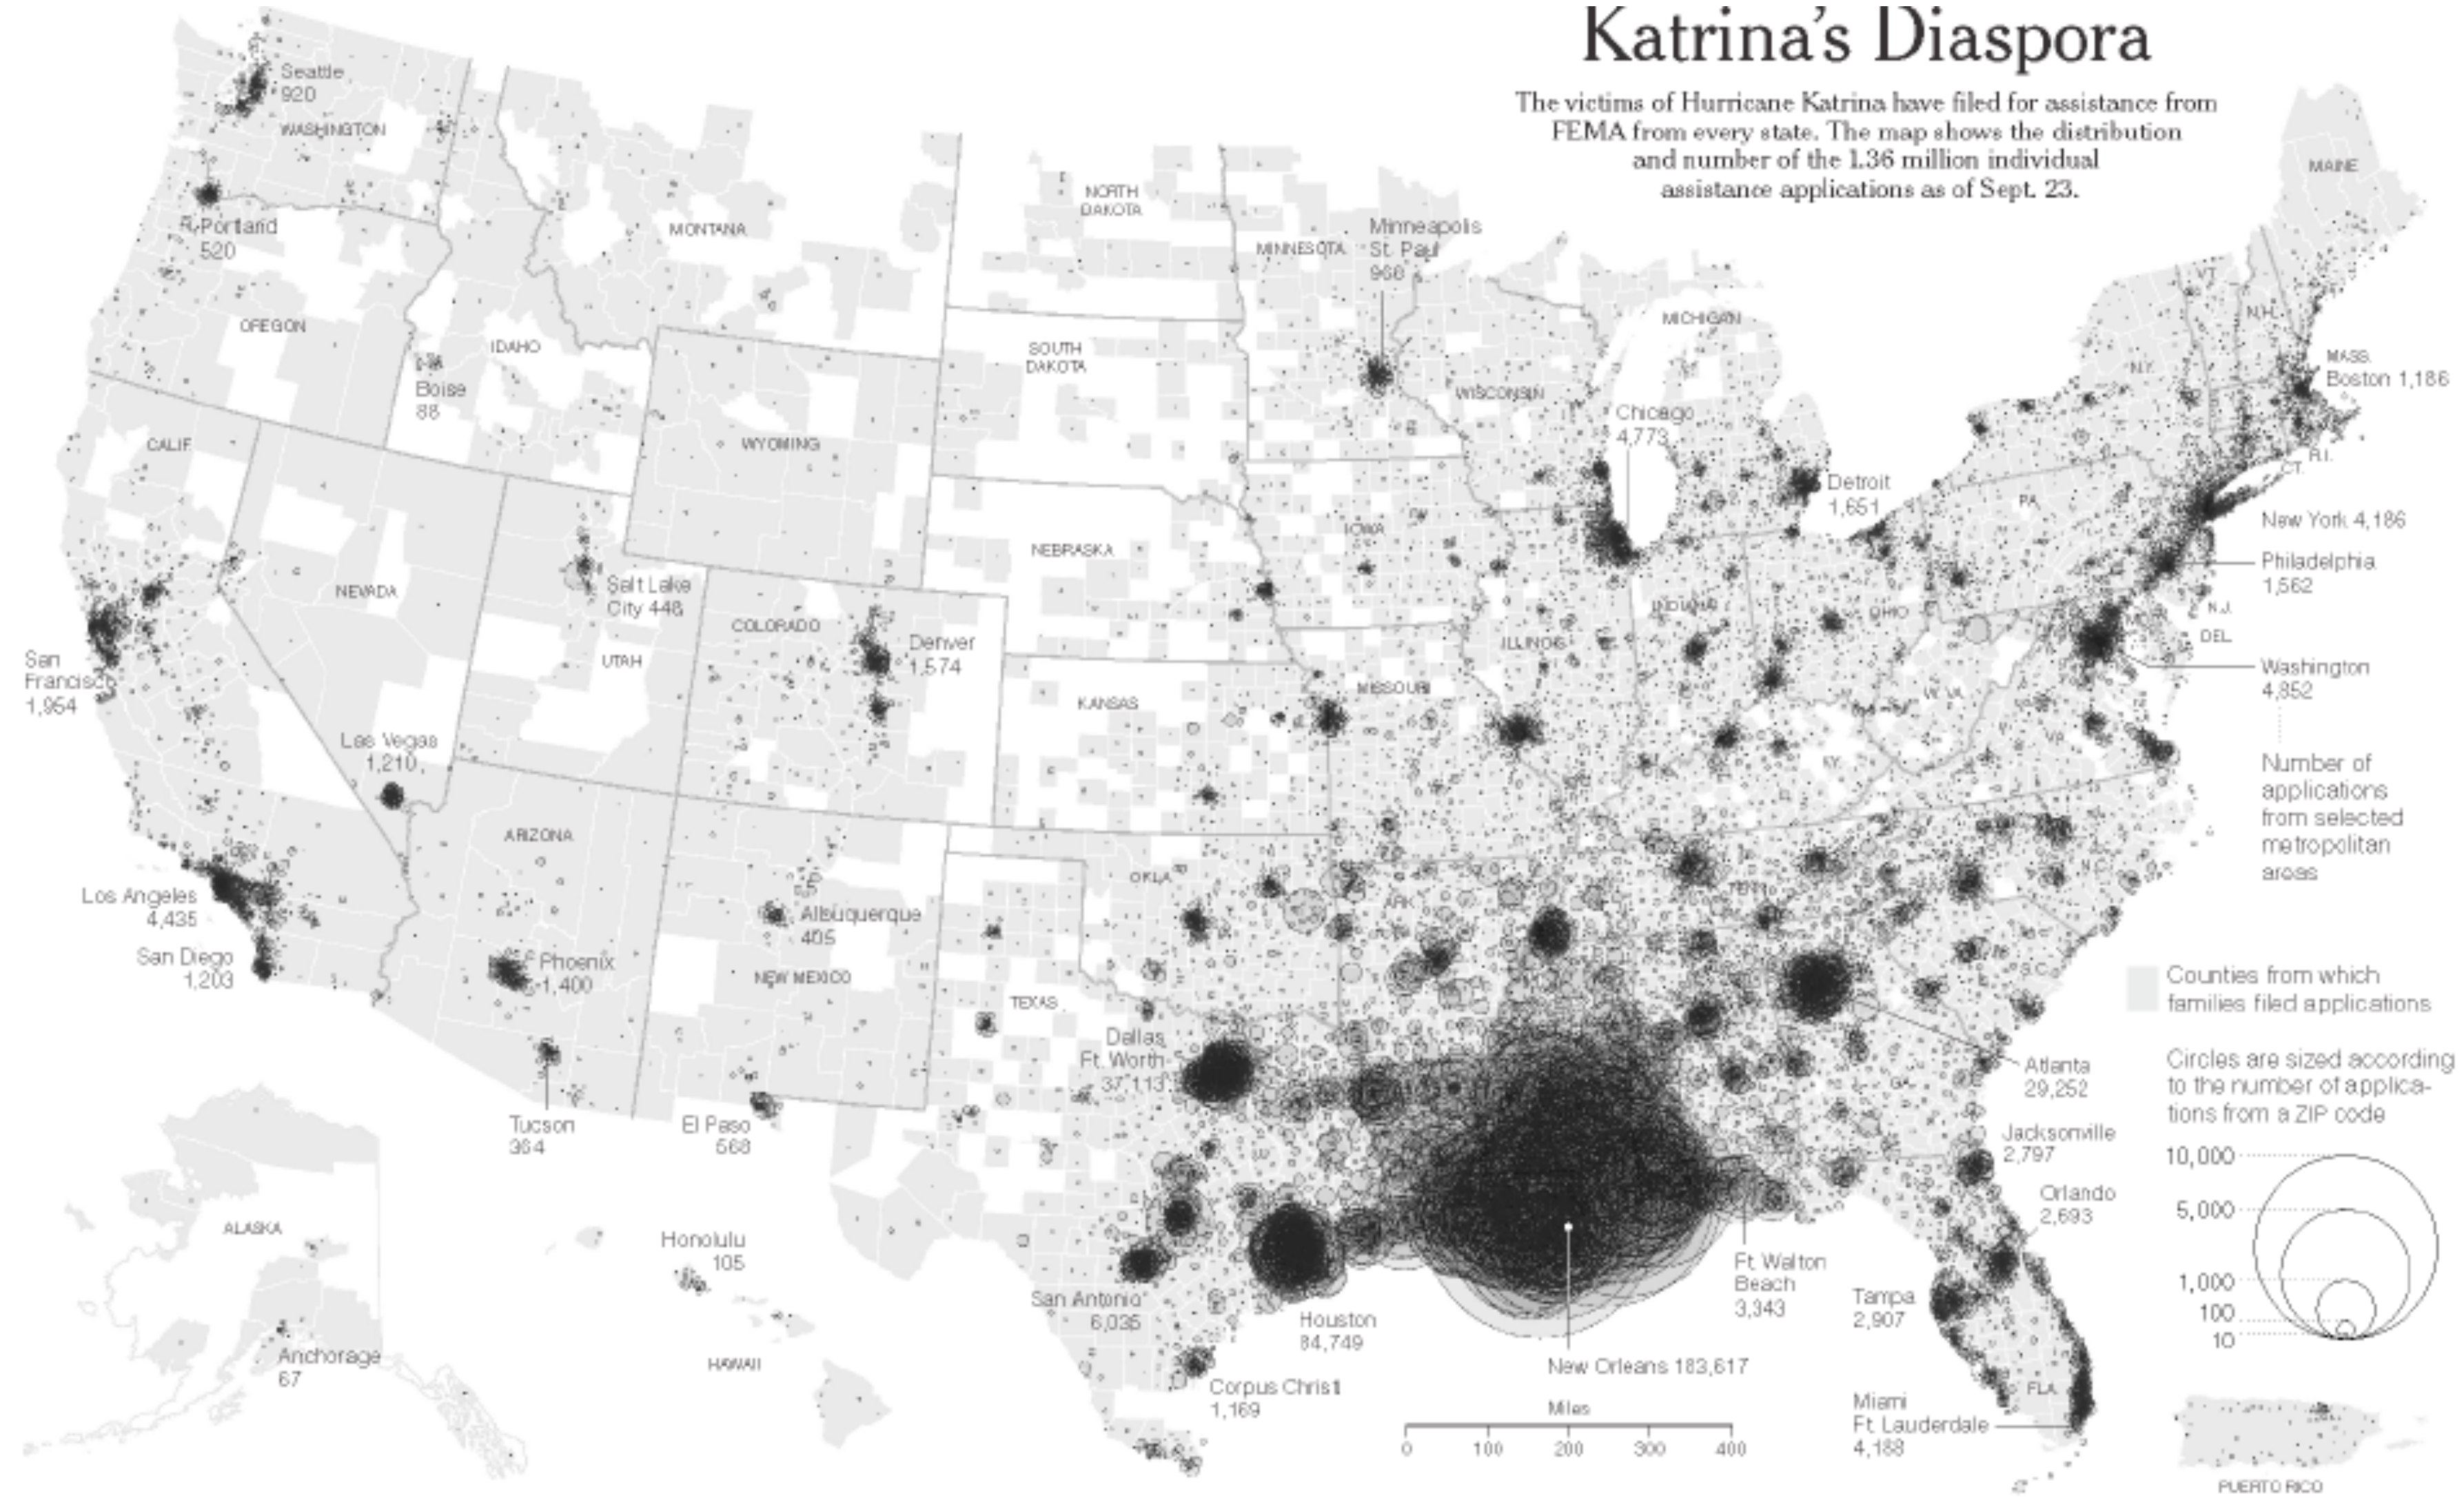

Clinton's large wins in Midwestern cities like Cleveland and Detroit weren't enough to offset the Trump margins from many more smaller cities and counties. For example, Clinton won seven of Ohio's 88 counties. She lost the area around Dayton, a medium-sized city that voted for Obama in 2012.

**FLORIDA**

Clinton held her own in Democratic strongholds in South Florida and Orlando, but Trump flipped St. Petersburg by a slim margin. Trump pulled away with large wins up and down both coasts in areas growing with retirees.

# Katrina's Diaspora

The victims of Hurricane Katrina have filed for assistance from FEMA from every state. The map shows the distribution and number of the 1.36 million individual assistance applications as of Sept. 23.

They are scattered through all 50 states, the District of Columbia and Puerto Rico — 623 in Utah, 1,114 in Kansas, 101 way out in Alaska. They are clustered by the thousands in large Southern cities like Dallas, Atlanta and Memphis, and huddled in handfuls in unlikely hamlets like Shell Knob, Mo. (pop. 1,393) and Fountain Run, Ky. (pop. 236).

Evacuees fled Hurricane Katrina and the floods that followed in caravans of cars and fleets of buses, on helicopters and

emerges of where they landed, based on ZIP codes from which applications for aid were submitted to the Federal Emergency Management Agency as of Sept. 23.

Of 1,356,704 applications, 86 percent came from Louisiana, Mississippi, Texas and Alabama. But 35,539 families were more than 1,000 miles from the Gulf — among the farthest: one in Nome, Alaska, 3,931 miles from the French Quarter and another in Lihue, Hawaii, 4,279 miles away.

Residents of New Orleans, a city that

centers. On average, the applicants came from counties where blacks were 28 percent of the population, more than twice the national average.

Baton Rouge, La., appears to be temporary home to 10 percent of evacuees, Houston 6.25 percent. But after the top 18 hubs, applicants are spread like the wind that whipped through their old neighborhoods: none of the other 900-plus metropolitan areas has even 1 percent of the total.

Some 4,000 ZIP codes — among them

## Applications by state

State	Applications	Pct.
Louisiana	523,149	38.6%
Mississippi	383,840	28.3%
Texas	156,895	11.6%
Alabama	109,469	8.1%
Georgia	35,342	2.6%
Florida	31,005	2.3%
Tennessee	15,529	1.1%
Arkansas	11,027	0.8%
California	10,953	0.8%
Illinois	4,400	0.3%

## Applications by distance from New Orleans

MILES	APPLICANTS	PCT.
0-100	626,232	46.2%
100-200	338,080	24.9%
200-400	184,169	13.6%
400-800	143,497	10.6%
800-1,600	45,371	3.3%
1,600-3,200	13,403	1.0%
3,200+	232	0.0%

Distances could not be calculated for 0.4 percent of applications.

# What Your Global Neighbors Are Buying

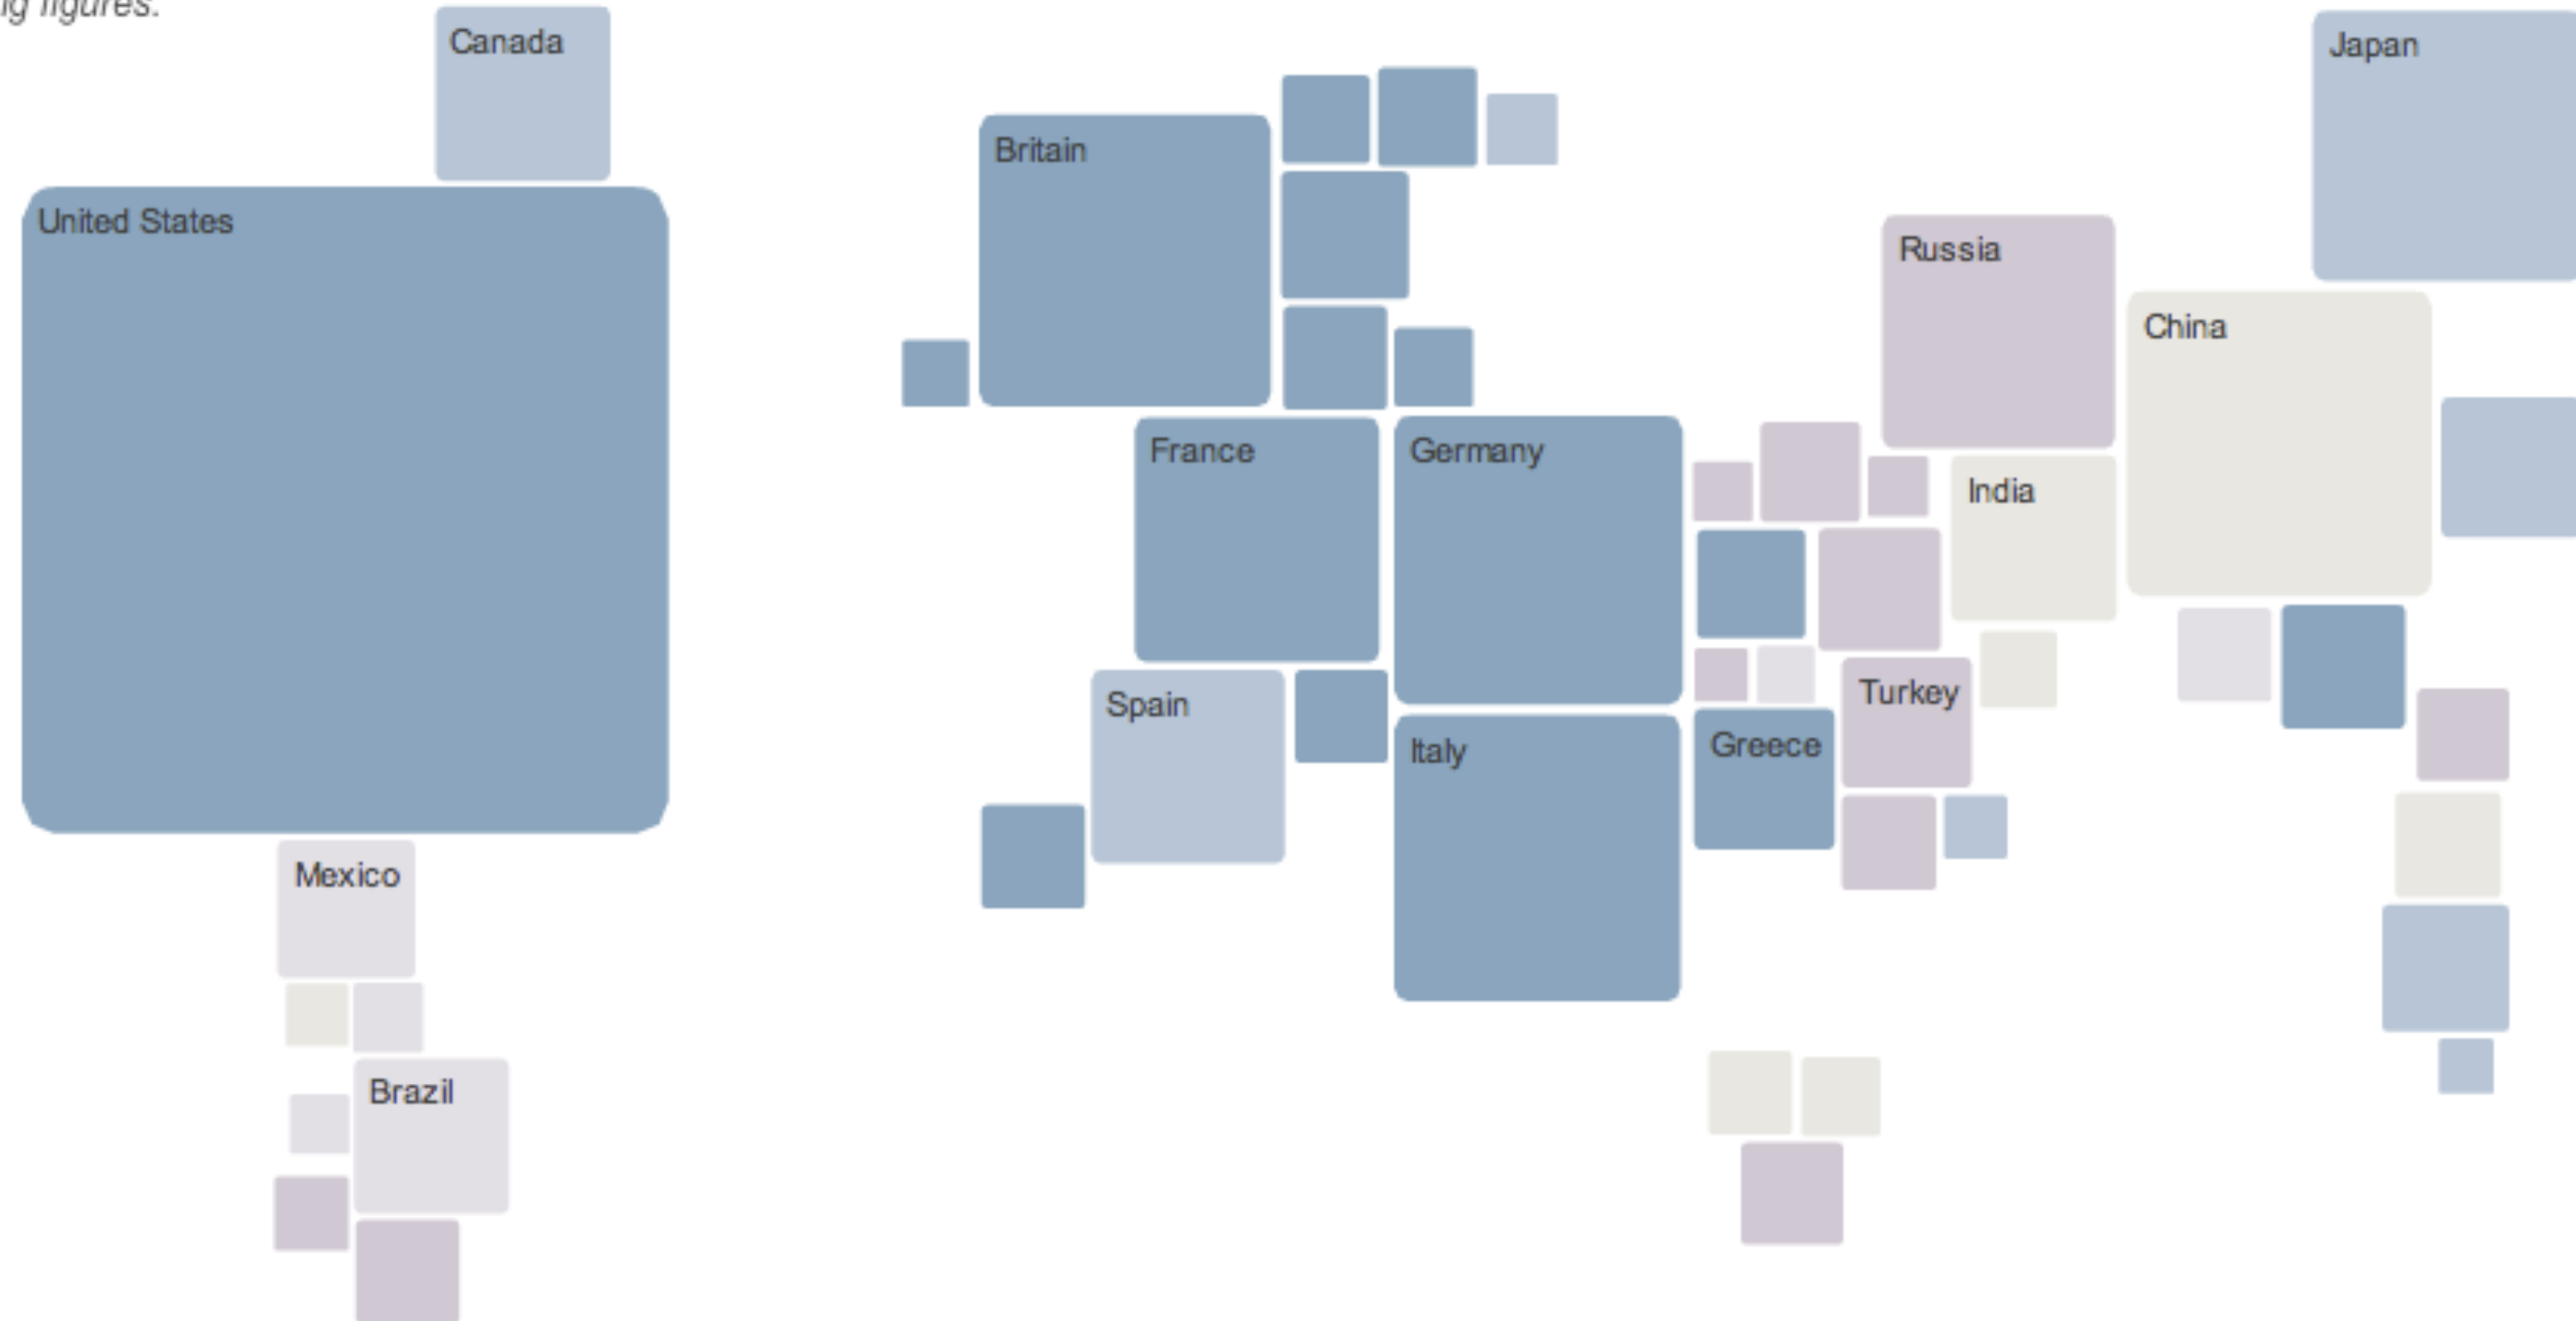

How people spend their discretionary income – the cash that goes to clothing, electronics, recreation, household goods, alcohol – depends a lot on where they live. People in Greece spend almost 13 times more money on clothing as they do on electronics. People living in Japan spend more on recreation than they do on clothing, electronics and household goods combined. Americans spend a lot of money on everything. [Related Article](#)

# Carte Figurative des pertes successives en hommes de l'Armée Française dans la campagne de Russie 1812-1813.

Devisé par M. MINARD, Inspecteur Général des Ponts et Chaussées en retraite. Paris, le 20 Novembre 1869.

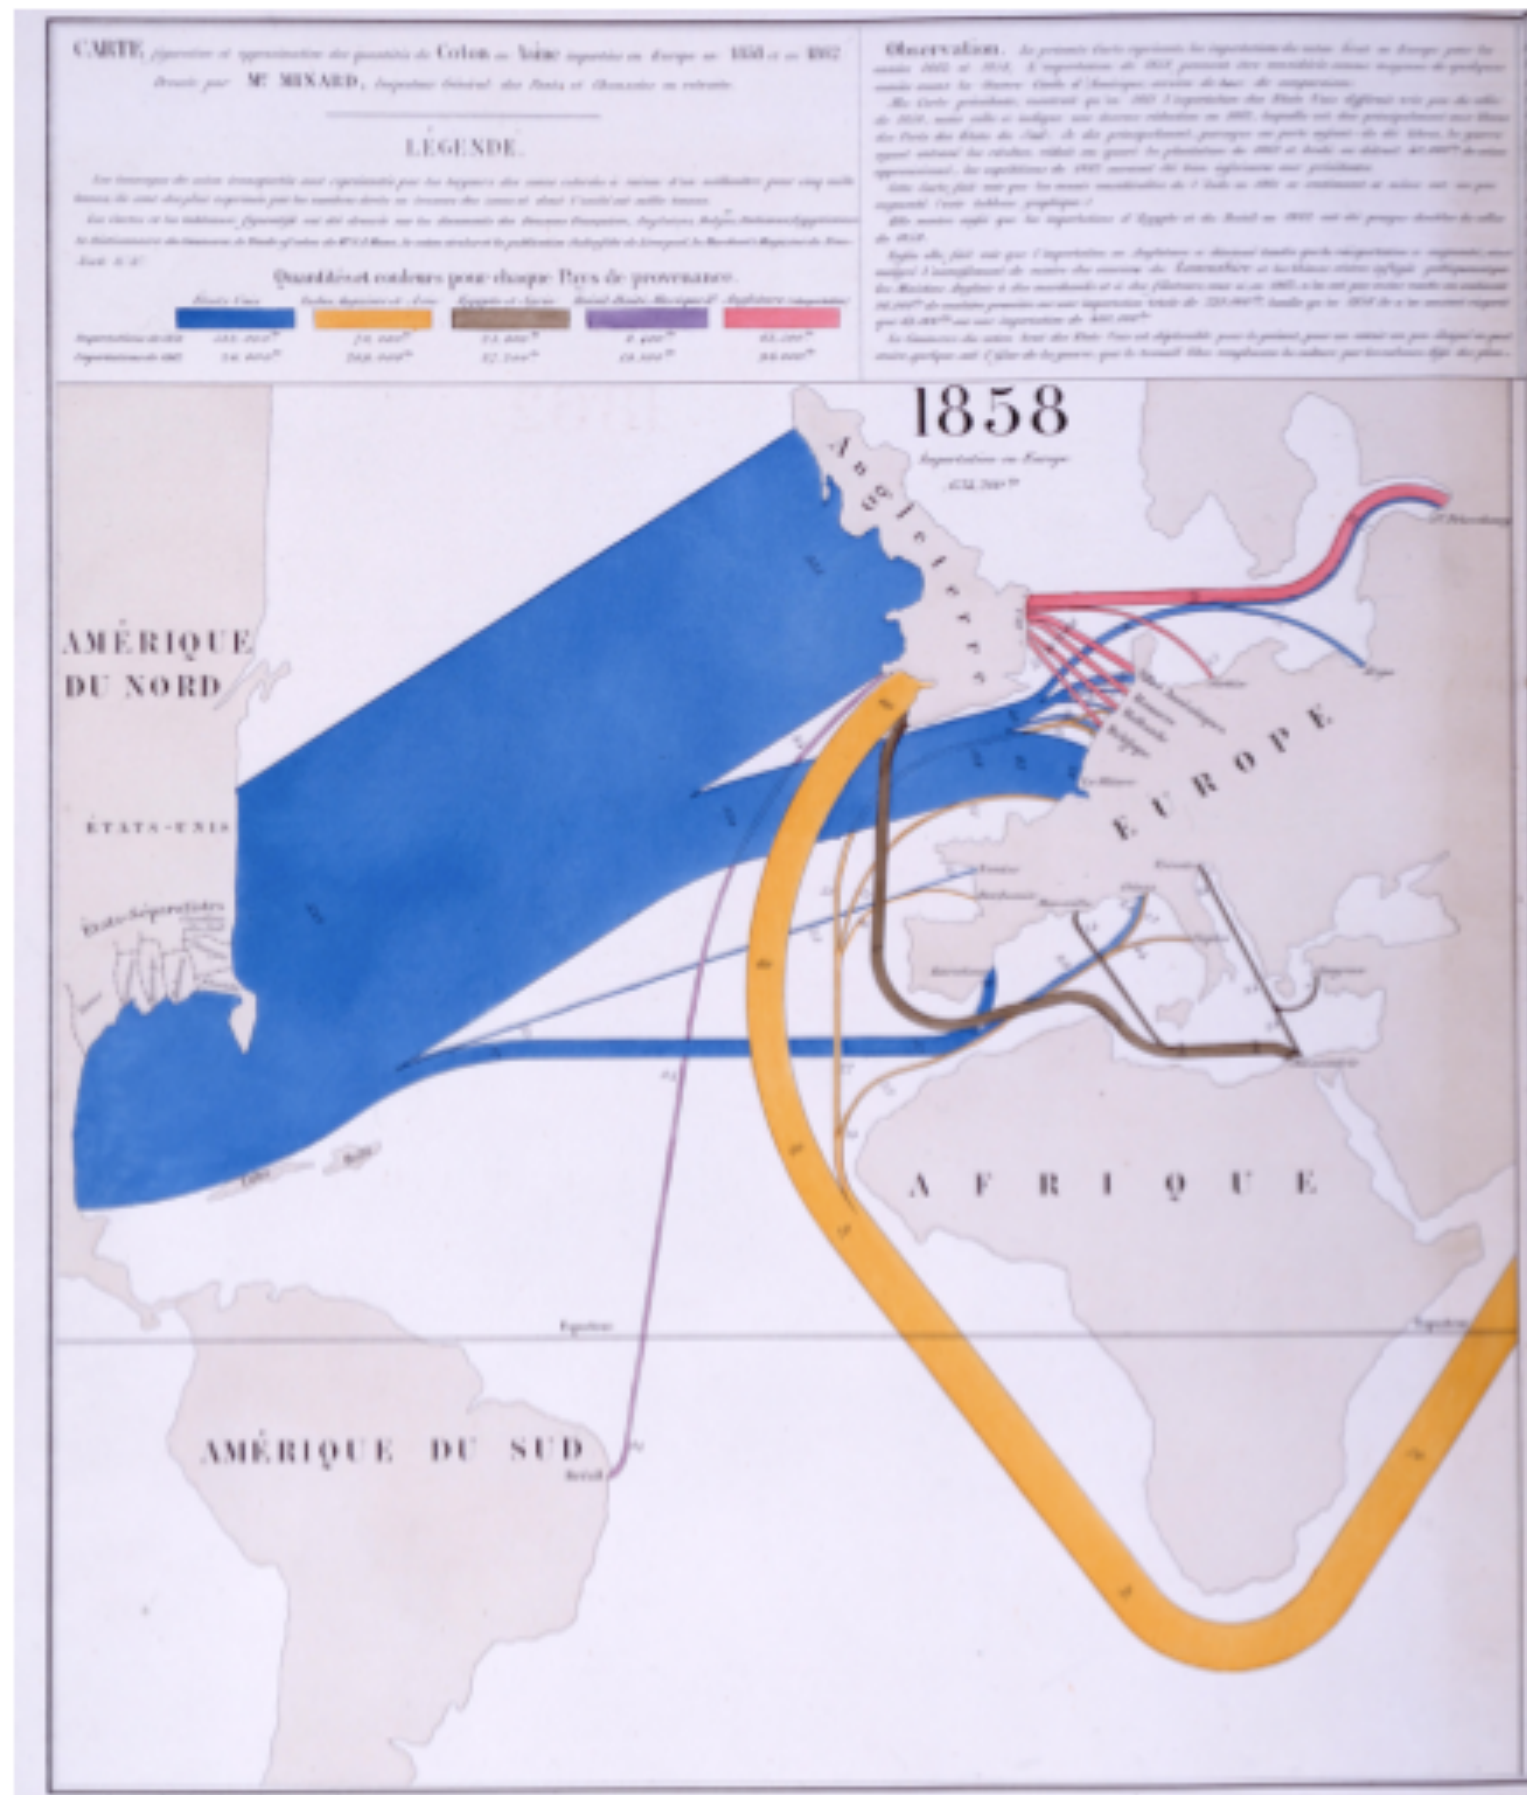

Les nombres d'hommes présents sont représentés par les largeurs des zones colorées à raison d'un millimètre pour dix mille hommes; ils sont de plus écrits en traits des zones. Le rouge désigne les hommes qui ont été en Russie; le noir ceux qui en sont restés. Les renseignements qui ont servi à dresser la carte ont été puisés dans les ouvrages de M. M. Chiers, de Ligny, de Fezensac, de Chambray et le journal inédit de Jacob, pharmacien de l'Armée depuis le 23 Octobre. Pour mieux faire juger à l'œil la diminution de l'armée, j'ai supposé que les corps de Louis-Nicolas et du Maréchal Davoust qui avaient été détachés sur Minsk et Mielow et qui rejoignirent Czernowitzi, avaient toujours marché avec l'armée.
